Study & Evaluation Scheme Study Summary

Name of the Faculty	Faculty of Technology
Name of the Department	Department of Computer Science & Engineering
Program Name	Bachelors of Technology in Computer Science & Engineering
Duration	4 Years
Medium	English

Evaluation Scheme

Evaluation Scheme										
Type of Papers	Internal Evaluation	End Semester Evaluation	Total (%)							
	(%)	(%)								
Theory	40	60	100							
Practical/ Dissertations/Project	40	60	100							
Report/ Viva-Voce										
Internal Evaluati	on Components	(Theory Papers)								
Mid Sem Exam		60 Marks								
Assignment-I		30 Marks								
Assignment-II		30 Marks								
Attendance		30 Marks								
Internal Evaluatio	n Components ((Practical Papers)								
Quiz One		30 Marks								
Quiz Two		30 Marks								
Quiz Three		30 Marks								
Lab Records/ Mini Project		30 Marks								
Attendance		30 Marks								
End Semester	Evaluation (Pra	ictical Papers)								
ESE Quiz		40 Marks								
Practical Performance		20 Marks								
Lab Record		20 Marks								
Viva- Voce		20 Marks								

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Parts a) and b) of question Q1 to Q5 will be compulsory and each part carries 2 marks. Parts c), d) and e) of Q1 to Q5 Carry 8 marks each and the student may attempt any 2 parts.

Important Note:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Outcomes (POs). A question paper must assess the following aspects of learning as planned for a specific course i.e Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure - Bachelor of Technology in Computer Science & Engineering

Introduction

Computer Science Engineering (CSE) is an academic programme that integrates the field of Computer Engineering and Computer Science. It is one of the most sought after courses amongst engineering students. The course contains a plethora of topics but emphasises the basics of computer programming and networking. The topics covered in the course are computation, algorithms, programming languages, program design, computer software, computer hardware, and others Computer science engineers are involved in many aspects of computing, from the design of individual microprocessors, personal computers, and supercomputers to circuit designing and writing software that powers

Many technical institutes in India and abroad offer UG (Undergraduate) and PG (Postgraduate) level courses in Computer Science Engineering. Students can do BTech and MTech in Computer Science Engineering from these institutes. Students pursuing these courses get to learn about the design, implementation, and management of information systems of computer hardware and software.

Career Scope of Computer Science Engineering

CSE is one of the engineering specialisations. However, candidates pursuing this programme have the option of further choosing amongst various other specialisations like telecommunication, web designing, computer hardware and software implementation and maintenance, etc.

These professionals can work as a data scientist, computer programmer, systems analyst, hardware engineer, software developer, system engineer, IT consultant, system designer, networking engineer, web developer, database administrator, mobility tester, programmer, e-commerce specialist, and software tester.

Computer Science Engineering: Eligibility Criteria

Find below the basic eligibility requirement to pursue a Computer Science Engineering programme at the UG and PG level:

- Eligibility requirements for B.Tech in CSE: Aspirants should have passed the Class 12 exam from a recognized board with Physics, Chemistry, and Mathematics as core subjects. Besides this candidates should also have secured minimum aggregate marks of 60% in the above subjects combined.
- Eligibility requirements for M.Tech in CSE: Aspirants must have completed a BTech degree in the same specialization with a passing percentage

#### B. Choice Based Credit System (CBCS)

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the B.Tech. Computer Science & Engineering program:

Core competency: Students will acquire core competency in Computer Science & Engineering and in allied subject areas.

Program/Discipline Specific Elective Course (DSEC):

**Skilled communicator:** The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

**Critical thinker and problem solver:** The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic & advance knowledge and concepts of Computer Science & Engineering.

**Sense of inquiry:** It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

**Skilled project manager:** The course curriculum has been designed in such a manner as to enabling a graduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

**Ethical awareness/reasoning:** A graduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

**Lifelong learner:** The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skills will definitely develop acumen to perform well during the recruitment process of any premier organization and will have the desired confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world. There shall be four courses of Aptitude in Semester I, II, III & IV semesters and two courses of Soft Skills in III & IV Semesters and will carry no credit, however, it will be compulsory for every student to pass these courses with minimum

45% marks to be eligible for the certificate. These marks will not be included in the calculation of CGPI. Students have to specifically be registered in the specific course of the respective semesters.

**Skill Enhancement Course:** This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

**Generic/Open Elective Course (OEC):** Open Elective is an interdisciplinary additional subject that is compulsory in a program. The score of Open Elective is counted in the overall aggregate marks under Choice Based Credit System (CBCS). Each Open Elective paper will be of 3 Credits in III, IV and VI semesters. Each student has to take Open/Generic Electives from department other than the parent department. Core / Discipline Specific Electives will not be offered as Open Electives.

**Mandatory Course (MC):** This is a compulsory course but audit that does not have any choice and will be of 3 credits. Each student of B. Tech. Program has to compulsorily pass the Environmental Studies and Human values.

#### C. Program Outcomes of Bachelor of Technology in Computer Science & Engineering

PO-01	Engineering knowledge	Apply the knowledge of mathematical, scientific and engineering fundamentals in formulating and solving engineering problems.
PO-02	Problem analysis	Identify, analyze and provide substantial conclusions for complex engineering problems using mathematics, natural sciences, and engineering sciences
PO-03	Design/development of solutions	Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
PO-04	Conduct investigations of complex problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
PO-05	Modern tool usage	Apply modern tools and techniques for prediction and modelling of complex engineering activities with an understanding of the limitations.
PO-06	The engineer and society	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
PO-07	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
PO-08	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
PO-09	Individual and team work	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO-10	Communication	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-11	Project management and finance	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-12	Life-long learning	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

#### D. Program Specific Outcomes:

**PSO1:** Foundation of Computer System: Ability to understand the principles and working of computer systems. Students can assess the hardware and software aspects of computer systems.

**PSO2:** - Foundations of Software development: Ability to understand the structure and development methodologies of software systems. Possess professional skills and knowledge of software design process. Familiarity and practical competence with a broad range of programming language and open source platforms.

**PSO3:** Foundation of mathematical concepts: Ability to apply mathematical methodologies to solve computation task, model real world problem using appropriate data structure and suitable diagram.

**PSO4:** Applications of Computing and Research Ability: Ability to use knowledge in various domains to identify research gaps and hence to provide solution to new ideas and innovations.

#### E. Program Educational Objectives (PEO's)

**PEO1.** To be well familiar with the concepts of Computer Engineering for leading a successful career in industry or as entrepreneur or to pursue higher education.

**PEO2**. To develop techno-commercial skills for providing effective solutions to complex problems using domain knowledge of Computer Engineering.

**PEO3.** To instill lifelong learning approach towards constantly evolving technologies with innovative and ethical mindset.

#### F. Pedagogy & Unique practices adopted:

"Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" online or face-to-face. They alter the power ratios in teaching and learning relationships between students and educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video Based Learning (VBL) & Learning through Movies (LTM): These days technology has taken a front seat and classrooms are well equipped with equipment and gadgets. Video-based learning has become an indispensable part of learning. Similarly, students can learn various concepts through movies. In fact, many teachers give examples from movies during their discourses. Making students learn few important theoretical concepts through VBL & LTM is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL & LTM, wherever possible.

*Field/Live Projects:* The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

*Industrial Visits:* Industrial visit are essential to give students hand-on exposure and experience of how things and processes work in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for a report of such a visit relating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course andthe mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) Marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

*Industry Focused programmes:* Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners.

*Induction program:* Every year 3 weeks induction program is organized for 1st year students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

*Mentoring scheme:* There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: organizing & participation in extracurricular activities will be mandatory to help students develop confidence & face audience boldly. It brings out their leadership qualities along with planning & organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning(A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning(A2 Assignment), workshops, Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

# Detailed Syllabus (Semester wise /course wise)

#### **SEMESTER 1**

#### **Common**

PH3101	Title: Engineering Physics	LTPC
		3 1 0 4
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	Students will be able to understand the basic of classical and modern physics and	
	quantum mechanics and electromagnetic concepts with basic	knowledge of
E 4 10 4	optics.	
<b>Expected Outcome</b>	Will have the ability to Analyze the intensity variation of light due to Polarization, interference and diffraction. Will also be able to explain working	
	principle of lasers and Explain fundamentals of quantum mechanics.	
Unit No.	Unit Title	No. of hours
The sa T	Daladidada Madaada	(per Unit)
Unit I	Relativistic Mechanics	5
Inertial and Non-inertial Frames, Postulates of Special Theory of Relativity, Galilean and Lorentz Transformation,		
Length Contraction and Time Dilation, Addition of Velocities, Mass Energy Equivalence and Variation of Mass with		
Velocity.	17100 4	
Unit II	Interference and Diffraction	5
Coherent Sources, Conditions of Interference; Young's double slit experiment, Interference in thin films – Wedge Shaped Film, Newton's Rings. Diffraction: Single Slit Diffraction, Diffraction Grating, Raleigh's Criterion of		
Resolution, Resolving Power of Grating.		
Unit III	Polarization and Laser	5
Phenomenon of Double Refraction, Ordinary and Extra-ordinary Rays, Nicol Prism; Polarisation: Malus law,		
Brewster's law; Production and Analysis of Plane, Circularly and Elliptically Polarized Light. Laser: Principle of		
Laser Action, Einstein's Coefficients, Construction and Working of He-Ne and Ruby Laser.		
Unit IV	<b>Electromagnetic Properties of Materials</b>	5
Ampere's Law and Displacement Current, Maxwell's Equations in Integral and Differential Forms, Electromagnetic Wave Propagation in Free Space and Conducting Media, Poynting Theorem.		
Unit V	Wave Mechanics	4
Wave Particle Duality, de Broglie Concept of Matter Waves, Heisenberg Uncertainty Principle and its applications,		
Schrödinger Wave Equation and Its Applications: Particle in a Box (one dimensional only).		
Text Books	1. Beiser, Concepts of Modern Physics, McGraw Hill	
	2. Dr Amit Dixit, Engineering Physics, Nano Edge Publication	IS
Reference Books	Robert Resnick, Introduction to Special theory of Relativity, Wiley	
	2. AjoyGhatak, Optics, TMH	
	3. David J. Griffith, Introduction to Electrodynamics, PHI	
	4. William Hayt, Engineering Electromagnetics, TMH	
<b>Mode of Evaluation</b>	Internal and External Examinations	
Recommendation by Board of	14-05-2022	
Studies on		
Date of approval by the	20-10-2022	
Academic Council		

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Emt)/ None (Use, for more than One)
	Students should be able to Understand special theory of realtivity (STR), concepts linked with STR and radiation laws.	2	Emp
CO2	Students should be able to Understand interference, diffraction and able to connect it to a few engineering applications.	2	S
	Students should be able to Explain the phenomena of polarization in electromagnetic waves and their production, Detection and analysis. They will also understand the operation and working principle of laser.		S
	Students should be able to Understand electromagnetic theory using maxwells equations, and its uses in various engineering application. They will also understand the difference between dia, para and ferromagnetic materials.	2	Emp
CO5	Students should be able to Explain fundamentals of quantum mechanics and apply it to problems on bound states.	1	Emp

PH3140	Title: Engineering Physics Lab	L T P C 0 0 2 1
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and fabricate engineering and technical equipments.	
<b>Expected Outcome</b>	On Completion of this course, students are able to – Develop skills to impart practical knowledge in real time solution. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.	
	List of Experiments	•

#### List of Experiments

- 1. To determine the wavelength of monochromatic light by Newton's ring.
- 2. To determine the wavelength of monochromatic light with the help of Fresnel's biprism.
- 3. To determine the focal length of two lenses by nodal slide and locate the position of cardinal points.
- 4. To determine the specific rotation of cane sugar solution using half shade polarimeter.
- 5. To determine the wavelength of spectral lines using plane transmission grating.
- 6. To determine the specific resistance of the material of given wire using Carey Foster's bridge.
- 7. To determine the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of the coil.
- 8. To verify Stefan's Law by electrical method.
- 9. To calibrate the given ammeter and voltmeter.
- 10. To study the Hall effects and determine Hall coefficient, carnier density and mobility of a given semiconductor material using Hall-effect set up.
- 11. To determine energy bank gap of a given semiconductor material.
- 12. To determine E.C.E. of copper using Tangent or Helmholtz galvanometer.
- 13. To draw hysteresis curve of a given sample of ferromagnetic material and from this to determine magnetic susceptibility and permeability of the given specimen.
- 14. To determine the balistic constant of a ballistic galvanometer.
- 15. To determine the viscosity of a liquid.

Mode of Evaluation	Internal and External Examinations

Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	Learning objectives is to improve confidence in technology use and increased awareness of opportunities afforded to individuals with computer application skills.	
<b>Expected Outcome</b>	Recognize basic computer hardware architecture constructs such as instructions sets, memory, CPU, external devices, and data Representation	

#### **List of Experiments**

- 1. Programs using I/O statements and expressions.
- 2. Programs using decision-making constructs.
- 3. Write a program to find whether the given year is leap year or Not? (Hint: not every centurion year is a leap. For example 1700, 1800 and 1900 is not a leap year)
- 4. Design a calculator to perform the operations, namely, addition, subtraction, multiplication, division and square of a number.
- 5. Check whether a given number is Armstrong number or not?
- 6. Populate an array with height of persons and find how many persons are above the average height.
- 7. Populate a two dimensional array with height and weight of persons and compute the Body Mass Index of the individuals.
- 8. Given a string a\$bcd./fgll find its reverse without changing the position of special characters. (Example input: a@gh%;j and output: j@hg%;a)
- 9. Convert the given decimal number into binary, octal and hexadecimal numbers using user defined functions.
- 10. From a given paragraph perform the following using built-in functions:
  - a. Find the total number of words.
  - b. Capitalize the first word of each sentence.
  - c. Replace a given word with another word.
- 11. Solve towers of Hanoi using recursion.
- 12. Sort the list of numbers using pass by reference.
- 13. Generate salary slip of employees using structures and pointers.
- 14. Compute internal marks of students for five different subjects using structures and functions.
- 15. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using random access file.

CS3149	Title: Programming with C for Problem Solving Lab	LTPC 0021					
Version No.	1.0						
<b>Course Prerequisites</b>	Nil						
Objectives	Introduce students to the basic concepts of programming						
	Explore the fundamental concepts of C programming						
	Understand the advanced programming techniques						
	Demonstrate the concepts related to functions and file handling operation						
<b>Expected Outcome</b>	At the end of this course students will be able to:						
	Demonstrate the basic concepts of Computer components						
	• Design, implement, test, debug and document programs in C.						
	Illustrate functions, and functions with parameters passing option.						
	Distinguish pointers and arrays, perform pointer arithmetic						
	List of Experiments						

- 1. Printing the reverse of an integer.
- 2. Printing the odd and even series of N numbers.
- 3. Get a string and convert the lowercase to uppercase and vice--versa using getchar() and putchar().
- 4. Input a string and find the number of each of the vowels appear in the string
- 5. Accept N words and make it as a sentence by inserting blank spaces and a full stop at the end
- 6. Printing the reverse of a string
- 7. Searching an element in an array using pointers
- 8. Checking whether the given matrix is an identity matrix or not
- 9. Finding the first N terms of Fibonacci series
- 10. Printing the reverse of an integer.
- 11. Printing the odd and even series of N numbers.
- 12. Get a string and convert the lowercase to uppercase and vice--versa using getchar() and putchar().
- 13. Input a string and find the number of each of the vowels appear in the string
- 14. Accept N words and make it as a sentence by inserting blank spaces and a full stop at the end
- 15. Printing the reverse of a string
- 16. Searching an element in an array using pointers
- 17. Checking whether the given matrix is an identity matrix or not
- 18. Finding the first N terms of Fibonacci series
- 19. Declare 3 pointer variables to store a character, a character string and an integer respectively. Input values into these variables. Display the address and the contents of each variable
- 20. Define a structure with three members and display the same
- 21. Declare a union with three members of type integer, char, string and illustrate the use of union
- 22. Recursive program to find the factorial of an integer

#### **Course Outcome For MA3105**

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Emt)/ None (Use, for more than One)
COI	Students should be able to Learn the basic principles of multivariable calculus with their proofs. They should be able to classify partial differential equations and transform them into canonical form. They will also understand how to extract information from partial derivative models in order to interpret reality.		Emp
CO2	Students should be able to Understand and learn how to find the area and volume of any region and solid body respectively by integral and also find the moments of inertia for a thin plate in plane.		Emp
CO3	Students should be able to Understand theorems related to directional derivative of gradient and reproduce its proof. They should be able to Explain the concept of a vector integration in a plane and in space.	2	S
CO4	Know basic application problems described by second order linear differential equations with constant coefficients. They should be also able to understand and solve the applications associated with Laplace Transform.		S
CO5	Students should be able to Solve the linear equations using matrix properties and Determine characteristic equation, eigen values, eigenvectors and diagonalizable of a matrix.	1	Emp

CS3242	Title: Advance C Programming Lab	L T P C 0 0 2 1				
Version No.	1.0					
<b>Course Prerequisites</b>	Nil					
Objectives	Study of basic programming principles introduced in Programm Advanced concepts of program design, implementation and testing					
Expected Outcome  Know concepts in problem solving, to do programming in C language. To write diversified solutions using C language						
List of Experiments						

- WAP accessing function definition with the help of pointer.
- 2. WAP accessing 2-D Array with the help of pointer.
- WAP declaring an array taking length from the user.
- WAP declaring 2-D array by using Dynamic memory allocation technique.
- WAP passing arguments to main function.
- WAP making function accepting VAR_ARGS.
- 7. Practice of UNIX Programming Environment. (Complete command line environment for C Programming in GCC.)
- 8. Making of Header File and Library Object code.
- 9. Practice of System Calls / System APIs (Any 10 APIs).

CS3243	Title: HTML5 and CSS Lab	L TPC						
		0 0 2 1						
Version No.	1.0							
<b>Course Prerequisites</b>	Nil							
Objectives	The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and design WebPages.							
Expected Outcome  On Completion of this course, students are able to – Develop skills to impart practic knowledge in real time solution. Understand principle, concept, working and application of new technology and solve real life problems.								
List of Experiments								

- Implementation of HTML 5 Tags 1.
- Design a Form using HTML & CSS.
- 3. Implement Different types of CSS (internal, external, Inline)
- 4. Design a webpage having 4 Parts. Header, footer, left, right.
- 5. Implementation of Tables with CSS properties.
- 6. Integration of Bootstrap with The Webpage.
- 7. Design Responsive Student Registration Form with at least 10 field.
- 8. Implement the basic webpage using HTML CSS and Bootstrap.

CY3205	Title: Environmental Studies	LTPC 2002				
Version No.	1.0					
<b>Course Prerequisites</b>	Nil					
Objectives	Creating awareness among engineering students about the importance of environment, the effect of technology on the environment and ecological balance is the prime aim of the course.					
<b>Expected Outcome</b>	Students will understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.					
Unit No.	Unit Title	No. of hours (per Unit)				
Unit I	Introduction to Environmental studies and Ecosystems	5				

Multidisciplinary nature of environmental studies, Scope and importance, Need for public awareness. Concept, Structure and function of an ecosystem, Energy flow in an ecosystem: food chains, food webs and ecological pyramids. Examples of various ecosystems such as: Forest, Grassland, Desert, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries), Producers, consumers and decomposers. Hydrological cycle. Water as a universal solvent. Concept of DO, BOD and COD. Sedimentation, coagulation, filocculation, filtration, pH

Unit II Natural Resources: Renewable and Non- renewable resources

5

Land as a resource, land degradation, landslides (natural and man-induced), soil erosion and desertification. Forests and forest resources: Use and over-exploitation, deforestation. Impacts of deforestation, mining, dam building on environment and forests. Resettlement and rehabilitation of project affected persons; problems and concerns with examples. Water resources: Use and over-exploitation of surface and ground water, floods, drought, conflicts over water (international and inter-state). Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems with examples. Energy resources: Renewable and non renewable energy sources, use of alternate energy sources, growing energy needs.

Aims and objectives of Environmental Impact Assessment (EIA)

#### Unit III Biodiversity and Conservation 5

Levels of biological diversity: genetic, species and ecosystem diversity. Bio-geographic zones of India. Ecosystem and biodiversity services. Biodiversity patterns and global biodiversity hot spots, India as a mega-biodiversity nation; Endangered and endemic species of India. Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit IV Environmental Pollution 4

Environmental pollution and its types. Causes, effects and control measures of :a) Air pollution b) Water pollution – freshwater and marine c) Soil pollution d) Noise pollution e) Thermal pollution

Nuclear hazards and human health risks, Solid waste management: Control measures of urban and industrial waste. Indian National Ambient Air Quality Standards. Impact of air pollutants on human health, plants and materials

Unit V Environmental Policies and Practices

Concept of sustainability and sustainable development. Water conservation and watershed management. Climate change, global warming, acid rain, ozone layer depletion. Disaster management: floods, earthquake, cyclones and landslides.

Wasteland reclamation. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation. Environment: rights and duties. Population growth.

Water conservation, rainwater harvesting, watershed management.

Environmental Ethics – Issues and possible solution

Field work

Visit to a local polluted site-Urban/Rural/Industrial/Agricultural

Study of simple ecosystems-pond, river, hill slopes, etc.

Study of simple ecosystems-p	study of simple ecosystems-pond, fiver, init stopes, etc.

CS3209	Title: Computer Fundamentals and Organization	LTPC 3003
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	<ol> <li>Understand how the computer stores the data and interprets the information converts it into machine-understandable form</li> <li>Explain processing, and renders the output in a human-readable format</li> <li>Understand various registers and micro operations</li> </ol>	n and
Expected Outcome	<ol> <li>List the concepts of register transfer and micro-operation.</li> <li>Outline the basics of computer organization and instruction execution.</li> <li>Explain the various modes of data transfer.</li> <li>Explore the system architecture of multiprocessor and multicomputer.</li> <li>Interpret the various memory organization and I/O systems.</li> </ol>	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Register Transfer and Micro-operation	12
C fundamentals Ch Expressions - State Library functions.	naracter set - Identifier and keywords - data types - constants - Variables - Decements - Arithmetic, Unary, Relational and logical, Assignment and Conditional Co	elarations - Operators -
Unit II	Basic Computer Organization Computer Registers: Common bus system, Computer Instructions: Instruction formats,	12
	Central Processing Unit Unit: Introduction, General Register Organization, Stack Organization: Register stace ormats, Addressing Modes. CISC & RISC	12 k, Memory
Unit IV	Computer Arithmetic & I/O Organization	12
Introduction, Additi Output Organization	on and Subtraction, Multiplication Algorithms (Booth algorithm), Division Algorithm: Peripheral devices, Input – Output interface, Introduction of Multiprocessors: Chambodes of Data Transfer, Priority Interrupt, Direct Memory Access.	ms, Input -
Unit V	Memory Organization	12
Memory Organizat Memory, Virtual M	ion: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative, Memory,	Cache

#### Course Outcome For CS3305

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	The Students should be able to Know about Database Management System, a description of the Database Management structure, a Database, basic foundational terms of Database, Understand the applications of Databases, Explain & use design principles for logical design of databases, including the E -R method and normalization approach.		Emp
CO2	The Students should be able to Utilize the knowledge of basics of SQL and construct queries using SQL, Use commercial relational database system (Oracle) by writing Queries using SQL, Apply SQL commands to destroy and alter tables and views, Write queries in relational algebra using a collection of operators, Use their knowledge of SQL query to write nested and correlated queries, Apply aggregate operators to write SQL queries that are not expressible in relational algebra.		Emp
CO3	The Students should be able to Apply normalization for the development of application software's. Enter or remove data from Forms, Demonstrate to modify Forms,	2	Emp
CO4	The Students should be able to Know about Transaction	2	Emp

	system, Testing of serializability, Serializability of schedules, conflict & view serializable schedule, deadlock handling techniques.	
CO5	The Students should be able to Know about Concurrency control and locking Techniques for concurrency control with types of concurrency control techniques, Time stamping protocols for concurrency control, validation based protocol, multiple granularity, Multi version schemes, Recovery with concurrent transaction.	Emp

CS3340	Title: Data Structure Programming Lab	LTPC 0021
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	<ul> <li>The student should be able to understand the concept of management, data types, algorithms, ADT, pointer, c prog method, efficiency of recursion</li> <li>The student should be able to understand the concepts linked list and implementation of insertion and deletion o</li> <li>The student should be able to understand the concept of management, data types, algorithms, ADT, pointer, c prog method, efficiency of recursion</li> </ul>	of stack ,queue , peration  Dynamic memory
<b>Expected Outcome</b>	Have a good knowledge of heap, search tree data structures. structures for solving other problems. Have a understanding of design techniques4. Design algorithms for new problems using Have a high level understanding and exposure to advanced topics and algorithms. Be able to implement the studied data structures a high level programming language	various algorithm these techniques. in data structures
	List of Experiments	

- 1. Write a C program to implement the following using an array a) Stack ADT b) Queue ADT.
- 2. Write a C program to implement the following using a singly linked list a. Stack ADT b. Queue ADT.
- 3. Write C Program to implement the DEQUE (double ended queue) ADT using arrays.
- 4. Write a C program to perform the following operations: a) Insert an element into a binary search tree. b) Delete an element from a binary search tree.
- 5. Write a C program that use recursive functions to traverse the given binary tree in a) Preorder b) Inorder and c) Postorder.
- 6. Write a C program for linear search and binary search.
- 7. Write C programs for the implementation of BFS and DFS for a given graph.
- 8. Write C programs for implementing the following sorting methods: a) Merge Sort b) Heap Sort.
- 9. Write a C program to perform the following operations. a) Insertion into a B-tree b) Deletion from a B-tree.
- 10. Write a C program to implement quick sort.

EC3341	Title: Digital Electronics Lab	L TPC 0 0 2 1								
Version No.	1.0									
Course Prerequisites	Nil									
Objectives	o acquire the basic knowledge of digital logic levels and application of knowledge to nderstand digital electronics circuits & to prepare the students to perform the analysis and design of various digital electronic circuits.									
<b>Expected Outcome</b>	<ul> <li>Students should be able to understand the verification and complex Logic Gates, to design Boolean function by using Universal Control of Students should be able to understand the Operation of Half Advantation/Full Subtractor Circuit Multiplexer/De-Multiplexer</li> <li>Students should be able to understand the verification of state the Flip flops and operation of UP/DOWN Counter.</li> </ul>	Gates. dder/Full Adder, Half er, 7-segment Decoder.								

#### **List of Experiments**

- 1. To implement and verify the Truth Table of different Logic Gates.
- 2. To verify the Operation of different Logic Functions designed by using Universal Gates only.
- 3. To verify the Operation of Half Adder/Full Adder Circuit.
- 4. To verify the Operation of Half Subtractor/Full Subtractor Circuit.
- 5. To verify the Operation of 4-bit Parallel Adder using IC 7483.
- 6. To verify the Operation of Multiplexer circuit.
- 7. To verify the Operation of De-multiplexer circuit.
- 8. To verify the Operation of 7-Segment Decoder.
- 9. To verify the state table of RS,JK, T, D Flip flops.
- 10. To verify the Operation of BCD Decade UP/DOWN Counter.

<b>Mode of Evaluation</b>	Internal and External Examinations
Recommendation by Board of Studies on	14-05-2022
Date of approval by the Academic Council	20-10-2022

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Realize truth tables of different logic gates like OR, AND, NOT AND XOR. They will also		Emp
	learn Functions using universal gates.		
	Students should be able to Design and implement combinational circuits like half adder/full adder, half subtractor/full subtractor, code converters, comparators, MUX/DEMUX		S
CO3	Students should be able to Design and implement sequential circuits like flip-flops, counters and shift registers	2	Emp

CS3342	Title: Oracle/SQL Server Lab	L T P C 0 0 2 1								
Version No.	1.0									
<b>Course Prerequisites</b>	Nil									
Objectives	The major objective of this lab is to provide a strong formal foundation in database concepts, technology and practice to the participants to groom them into well-informed database application developers									
<b>Expected Outcome</b>	<ul> <li>student should be able to write and execute DDL commands</li> <li>student should be able to write and execute DML command</li> <li>student should be able to write and execute DCL command</li> </ul>									
	List of Experiments									

#### List of Experiments

- 1. Installation of Oracle (min 11g version) of the Computer and description of SQL, Data Types, Constraints, DDL, DML, DCL, DQL
- 2. Create two tables (Employee and Department) in the database using SQL commands.
- 3. Insertion of Data into DB using SQL commands
- 4. Selection of Data from the DB using SQL
- 5. Manipulation or modification and Alteration of Data using SQL commands
- 6. Write SQL Commands to describe the foreign key, primary key concept.
- 7. Write SQL Commands to Join two table describe above such as natural join, Equi join, left outer join, right outer join and Cartesian product as well as differentiation between Natural join and Cartesian Product
- 8. Write a programme into PL/SQL to create, insert, update and delete the data into/from DB
- 9. Write relational algebra queries for a given set of relation.
- 10. How to declare and create Procedures and Cursors into PL/SQL through couple of examples
- 11. How to declare and create the triggers into SQL-PL/SQL with an example
- 12. Write PL/SQL program using FOR loop to insert 10 rows into a database table.

CS3307	Title: Discrete Design Structure	L T P C 2 2 0 4							
Managar NI	1.0	2 2 0 4							
Version No. Course Prerequisites	Nil								
Objective	We will be studying a body of mathematical concepts essential for the mastery of some of the higher-level computer science courses. Our goal is to obtain a useful mastery of discrete structures and methods basic to further work in computer science. To enhance your ability to formulate and solve applied problems								
	The student should be able to understand propositions and then would be able to find out the validity of the argument.								
	<ul> <li>Student should be able to understand the opposition prove equality in sets. Various op of inclusion and exclusion, and various properties.</li> </ul>	erations on sets, Principle							
Emported Outcome	Students will get complete knowledge of fun     of functions	ction and mapping. Types							
<b>Expected Outcome</b>	Students will understand the concepts of Various related properties. They will also lattice.	- · · · · ·							
	Student should be able to solve the problems of Permutation,     Probability and Combination. They will learn the concepts of counting     theory along with recurrence relation and generating functions.

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Understand propositions and then would be able to find out the validity of the argument.	2	None
CO2	Students should be able to understand the concepts of set along with proofs to prove equality in sets. Various operations on sets, Principle of inclusion and exclusion, and various properties of Relation.		S
CO3	Students should be able to Get complete knowledge of function and mapping. Types of functions	2	Emp
CO4	Students should be able to Understand the concepts of Group, Ring and Fields. Various related properties. They will also learn Lattice and types of lattice.	2	Emp
CO5	Students should be able to Solve the problems of Permutation, Probability and Combination. They will learn the concepts of counting theory along with recurrence relation and generating functions.		Emp

CS3424	Title: R Programming for Data Science and Data Analysis	LTPC
	·	4 0 0 3
Version No.	1.0	
<b>Course Prerequisites</b>	CS3324	
Objectives	R is a programming language for statistical computing and graphics clean, analyze, and graph your data. It is widely used by researchers fro to estimate and display results and by teachers of statistics and research methods	m diverse disciplines
<b>Expected Outcome</b>	On completion of this course, the students are expected to learn- Open Source platform  Machine Learning Operations and Exemplary support for data wrangling Quality plotting and graphing & Statistics	ng
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Getting Started with R and R Workspace	8

Introducing R, R as a programming Language, the need of R, Installing R, RStudio, RStudio's user interface, console, editor, environment pane, history pane, file pane, plots pane, package pane, help and viewer pane, R Workspace, R's working directory, R Project in R Studio, absolute and relative path, Inspecting an Environment, Inspect existing Symbols, View the structure of object, Removing symbols, Modifying Global Options, Modifying warning level, Library of Packages, Getting to know a package, Installing a Package from CRAN, Updating Package from CRAN, Installing package from online repository, Package Function, Masking and name conflicts

#### Unit II Basic Objects and Basic Expressions 7

Vectors, Numeric Vectors, Logical Vectors, Character Vectors, subset vectors, Named Vectors, extracting element, converting vector, Arithmetic operators, create Matrix, Naming row and columns, subsetting matrix, matrix operators, creating and subsetting an Array, Creating a List, extracting element from list, subsetting a list, setting value, creating a value of data frame, subsetting a data frame, setting values, factors, useful functions of a data frame, loading and writing data on disk, creating a function, calling a function, dynamic typing, generalizing a function. Assignment Operators, Conditional Expression, using if as expression and statement, using if with vectors, vectorized if: ifelse, using switch, using for loop, nested for loop, while loop

Unit III Working with Basic Objects and Strings 7

Working with object function, getting data dimensions, reshaping data structures, iterating over one dimension, logical operators, logical functions, dealing with missing values, logical coercion, math function, number rounding functions, trigonometric functions, hyperbolic functions, extreme functions, finding roots, derivatives and integration.

Unit IV Statistical function 7

sampling from a vector, Working with random distributions, computing summary statistics, covariance and correlation matrix, printing string, concatenating string, transforming text, Formatting text, formatting date and time, formatting date and time to string, finding string pattern, using group to extract data, reading data

Unit V Working with Data – Visualize and Analyze Data 7

Reading and Writing Data, importing data using built-in-function, READR package, export a data frame to file, reading and writing Excel worksheets, reading and writing native data files, loading built-in data sets, create scatter plot, bar

chart, pie chart, histogram and density plots, box plot, fitting linear model and regression tree

CS3310	Title: Python Programming	L T P C				
		2 0 0 2				
Version No.	1.0	I				
<b>Course Prerequisites</b>	Nil					
Objective	<ul> <li>To understand the history and development of Python Program</li> <li>To understand the data structures and looping concepts in P Language.</li> <li>To understand the important packages and functions in Pyth Language.</li> <li>To understand the importance of Python Programming Language or munging.</li> <li>To understand the impact of Python Programming Language</li> </ul>	ython Programming on Programming guage in data wrangling				
Expected Outcome	<ul> <li>Understand the core programming concepts of Python Programming Language.</li> <li>Know the Looping and condition statements in Python Programming Language</li> <li>Understand the different options in Data Management in Python Programming Language.</li> <li>Understand the importance of data transformation and its need in Python Programming Language</li> <li>Understand the core programming concepts of Python Programming Language.</li> </ul>					
Unit No.	Unit Title	No. of Hrs				
		(Per Unit)				
Unit I	Introduction to Python Environment	10				

History and development of Python, Why Python? Grasping Python's core philosophy, Discovering present and future development goals, Working with Python: Getting a taste of the language, Understanding the need for indentation, Working at the command line or in the IDE, Visualizing Power, Using the Python Ecosystem for Data Science, Accessing scientific tools using SciPy, Performing fundamental scientific computing using NumPy, Performing data analysis using pandas, Implementing machine learning using Scikit-learn, Plotting the data using matplotlib, Parsing HTML documents using Beautiful Soup, Setting Up Python for Data Science, Getting Continuum Analytics Anaconda, Getting Enthought Canopy Express, Getting pythonxy, Getting WinPython, Installing Anaconda on Windows, Linux and MAC

Unit II Data Structures, Looping and Branching 10

Working with Numbers and Logic, Performing variable assignments, Doing arithmetic, Comparing data using Boolean expressions, Creating and Using Strings, Interacting with Dates, Creating and Using Functions, Calling functions in a variety of ways, Using Conditional and Loop Statements, Making decisions using the if statement, Choosing between multiple options using nested decisions, Performing repetitive tasks using for, Using the while statement, Storing Data Using Sets, Lists, and Tuples: Performing operations on sets, Working with lists, Creating and using Tuples, Defining Useful Iterators, Indexing Data Using Dictionaries.

Unit III Data Management 10
-----------------------------

Working with Real Data, Working with Real Data, Uploading small amounts of data into memory, Streaming large amounts of data into memory, Sampling data, Accessing Data in Structured Flat-File Form, Sending Data in Unstructured File Form, Managing Data from Relational Databases, Interacting with Data from NoSQL Databases, Accessing Data from the Web, Juggling between NumPy and pandas, Validating Your Data, Removing duplicates, Manipulating Categorical Variables, Dealing with Dates in Your Data, Dealing with Missing Data, Slicing and Dicing: Filtering and Selecting Data, Concatenating and Transforming Working with HTML Pages, Working with Raw Text, Working with Graph Data.

Unit IV	Data Transformation	10
---------	---------------------	----

Understanding classes in Scikit-learn, Playing with Scikit-learn, Defining applications for data science, Performing the Hashing Trick, Using hash functions, Demonstrating the hashing trick, Working with deterministic selection, Considering Timing and Performance, Benchmarking with timeit, Working with the memory profiler, Performing multicore parallelism, Demonstrating multiprocessing.

Unit V	Python For Statistics	10

Exploring Data Analysis, The EDA Approach, Defining Descriptive Statistics for Numeric Data, Measuring central tendency, Measuring variance and range, Working with percentiles, Defining measures of normality, Counting for Categorical Data, Understanding frequencies, Creating contingency tables, Creating Applied Visualization for EDA, Inspecting boxplots, Performing t-tests after boxplots, Observing parallel coordinates, Graphing distributions, Plotting scatterplots, Using covariance and correlation, Using nonparametric correlation, Considering chi-square for tables, Using the normal distribution, Creating a Z-score standardization, Transforming other notable distributions, Detecting Outliers in Data, Clustering, Reducing dimensionality.

CS3311	Title: Beginner Level -CTP (Data Science)	L T P C 3 0 0 3								
Version No.	1.0									
Course Prerequisites										
Objective	<ul> <li>numerical data.</li> <li>Construct solid understanding o which various techniques could</li> </ul>	a science with the Python programming								
Expected Outcome	<ul> <li>requirements, mean and varianc</li> <li>Identify the type of statistical s can be applied</li> <li>Describe the basic concepts of d</li> </ul>	ituation to which different distributions								
Unit No.	Unit Title	No. of Hours: (Per Unit)								
Unit I	Statistics	18								
Descriptive Statistics, Measure of central tendency, Mean: Arithmetic mean, geometric mean and harmonic mean with its mathematical properties, mathematical relationship among these different means, median for raw data, odd number and even number, grouped data, mode for raw data and grouped data, properties of mean, median and mode and relationship among mean, median and mode measure of dispersion, standard deviation, variance, covariance and its properties, coefficient of variation, quartiles, quartile deviation and mean deviation, graphical representation of data Unidimensional, bi dimensional and multidimensional.										
Unit II	Testing of Hypothesis	17								

Introduction to testing of hypothesis, Statistical assumptions, Level of significance, confidence level, Type I Error, Type II error, Critical value, power of the test, sampling distribution, small sample test – t test for one and two sample mean, F test, Large Sample test – Z test for equality of single mean, equality of two sample mean, equality of single proportion, equality of two sample proportions, multiple comparison of sample means, one way analysis of variance with unequal sample sizes, Introduction to general linear model, assumptions of ANOVA, factors and levels in ANOVA, layout of one way ANOVA, skeleton of one way and two way ANOVA, calculation and examples for one-way and two-way ANOVA.

Unit III	Introduction to Data Science and	15
	Python Programming	

Introduction to Data Science - Why Python? Essential Python libraries, Python Introduction- Features, Identifiers, Reserved words, Indentation, Comments, Built-in Data types and their Methods: Strings, List, Tuples, Dictionary, Set Type Conversion, Operators. Decision Making- Looping, Loop Control statement, Math and Random number functions. User defined functions, function arguments and its types.

<b>Unit IV</b>	File, Exception Handling and OOP	10

User defined Modules and Packages in Python- Files: File manipulations, File and Directory related methods- Python Exception Handling. OOPs Concepts -Class and Objects, Constructors – Data hiding- Data Abstraction- Inheritance.

Mode of Evaluation	Internal and External Examination

CS3348	Title: : Beginner Level -CTP (Data Science) Lab  LTPC
	0 0 2 1
Version No.	1.0
<b>Course Prerequisites</b>	Nil
Objectives	<ul> <li>Analyze measures of central tendency and measures of dispersion for numerical data.</li> <li>Construct solid understanding of the type of statistical situation in which various techniques could be used to find solutions.</li> <li>Relate the basic concepts of data science with the Python programming knowledge.</li> <li>Interpret file handling and OOP concepts of Python.</li> </ul>
Expected Outcome	<ul> <li>Use discrete and continuous probability distributions, including requirements, mean and variance, and making decisions</li> <li>Identify the type of statistical situation to which different distributions can be applied</li> <li>Describe the basic concepts of data science for python.</li> <li>Implement Python file handling and OOP based solutions of various problem types</li> </ul>

#### **List of Experiments**

- 11. Find out mean, standard deviation, covariance on numerical columns for the following data set using any language/ tolls and list out what are the columns have good relation)
- 12. (Data set: https://archive.ics.uci.edu/ml/datasets/Auto+MPG ) Write a C program to implement the following using a singly linked list a. Stack ADT b. Queue ADT.
- 13. Perform required test on numerical columns for the following data set to consider data set mean and standard deviation for the population using any language/ tolls and list out what are the columns have good relation) ( Data set: https://archive.ics.uci.edu/ml/datasets/Auto+MPG)
- 14. Implement python script to generate data set with columns (sno, name, course, mark1, marks2, marks) using lists and dictionaries).
- 15. Implement a function to calculate total_marks and average for the generated data set and append the columns to the same data set )
- 16. Implement python script to read data from following file and keep them as objects)
- 17. ( Data File: https://archive.ics.uci.edu/ml/datasets/Adult )Write a C program for linear search and binary search.

Students should be able to write and run program by using loop functions.	CS3347	Title: Python Programming Lab	LTPC						
Course Prerequisites  Nil  Objectives  To write and test simple Python programs  To implement Python programs with conditionals and loops.  Use functions for structuring Python programs  • Students should be able to write programs on given values of each expressions.  • Students should be able to write and run program by using loop functions.			0 0 2 1						
Objectives  To write and test simple Python programs  To implement Python programs with conditionals and loops.  Use functions for structuring Python programs  • Students should be able to write programs on given values of each expressions  • Students should be able to write and run program by using loop functions.	Version No.	1.0							
To implement Python programs with conditionals and loops.  Use functions for structuring Python programs  • Students should be able to write programs on given values of each expressions  • Students should be able to write and run program by using loop functions.	<b>Course Prerequisites</b>	Nil							
Students should be able to write and run program by using loop functions.	Objectives	To implement Python programs with conditionals and loops.							
data.	<ul> <li>Students should be able to write and run program by using loop functions.</li> <li>Students should be able to plot the scatter matrix and test the value for the give</li> </ul>								

#### List of Experiments

1. Write and run a Python program that outputs the value of each of the following expressions:

i. 5.0/9.0

ii. 5.0/9

iii. 5/9.0

iv. 5/9

v. 9.0/5.0

vi. 9.0/5

vii. 9/5.0

viii. 9/5

Based on your results, what is the rule for arithmetic operators when integers and floating point numbers are used?

- 2. Write and run a Python program that asks the user for a temperature in Celsius and converts and outputs the temperature in Fahrenheit. (Use the formula given in the example above and solve for tempFin terms of tempC.
- 3. Here is an algorithm to print out n! (n factorial) from 0! to 19!:
  - 1) Set f = 1
  - 2) Set n = 0
  - 3) Repeat the following 20 times:
    - a) Output n, "! = ", f
    - b) Add 1 to n

#### c) Multiply f by n

Using a for loop, write and run a Python program for this algorithm.

- 4. Modify the program above using a while loop so it prints out all of the factorial values that are less than 1 billion.
- 5. Modify the first program so it finds the minimum in the array instead of the maximum.
- 6. (Harder) Modify the first program so that it finds the **index** of the maximum in the array rather than the maximum itself.
- 7. Modify the bubble sort program so it implements the improvements discussed in class. (HINT: To exit the main loop if the array is already sorted, simply change the loop variable to equal the last value so the loop ends early.)
- 8. Try entering the following literal values at the prompt. (Hit ENTER after each)

-5 -4.2

-4.2 4.5

4.14

0.90

Something odd should occur. Describe it on paper.

- 9. Reading from a CSV file of the given data using pandas library.
- 10. For the given data, plot the scatter matrix for males only, and for females only. Do you think that the 2 sub-populations correspond to gender?
- 11. For the given data, using python environment, apply, 1-sample t-test: testing the value of a population mean
- 12. For the given data, using python environment, apply, 2-sample t-test: testing for difference across populations

## **CSE-FS Specialization**

CS3312	Title: Introduction to UI/UX	L T P C 3 0 0 3						
Version No.	1.0							
<b>Course Prerequisites</b>	Nil							
Objective	<ul> <li>Through this course students will be able to learn how the users interact with the computers.</li> <li>They will get to know the different types of models, design process and interaction styles to develop a good user interface.</li> <li>They will also get to know different types of designing tools for UX designers.</li> </ul>							
<b>Expected Outcome</b>	<ul> <li>By the end of this course, the students can outline about human computer interaction.</li> <li>They can identify different types of models, design process and interaction styles for developing a good user interface.</li> <li>The students also can list out the different designing tools for UX designers.</li> </ul>							
Unit No.	Unit Title No. of (per							
Unit I	Introduction to HCI							

The human – Input Output Channels, Human Memory, Thinking: Reasoning and Problem Solving, The Computer – Text Entry Devices, Positioning, Pointing and Drawing, Display Devices, Memory, The Interaction – Models of Interaction, Frameworks & HCI.

Cognitive Models, Communication & Collaboration Models, Task Analysis, Dialog

Analysis & Design, Interaction Models, Programming Interactive System.

Unit II User Interface Design

The Software Life Cycle – Activities in the Life Cycle, Validation & Verification, Interactive Systems & Software Life Cycle, Using Design Rules – Standards, Guidelines, Usability Engineering – Problems with usability engineering, Iterative Design and Prototyping, Design Rationale – Process-oriented design rationale, Design space analysis, Psychological design rationale.

Direct Manipulation and Virtual Environments, Menu Selection Form Filling and Dialog Boxes, Command and Natural Languages, Interaction Devices, Collaboration and Social Media Participation, Naming and Abbreviations.

Unit III Mobile UI Design

Non Perceptual Technologies – Keypads, Touchpad, Gesture: Classification of Gesture based HCI – Application Domains: Multimodal interactions, Desktop, Virtual and Augmented Reality – Communication, Gesture Styles – Deictic, Gesticulation, Manipulation, Semaphores, Sign Language, Disruptive Innovation.

UX Tools for Wire framing and Prototyping – UXPin, Wireframe.cc, Pixate, Sketch, Invision, P.O.P. app, UX Tools for User Research and User Testing – Lookback, Wufoo, Typeform, Usabilla, Morae, UX, Recorder, UX Tools for Organizing Information – Lucid Chart, MindMeister, Coggle.it, Gliffy.

Unit IV Best Practices in UI Design 7

Views and Layout Tools – Paragraph Tag, Image Tag, Table Tag, Layout Tag, Frame Tag, Interaction – Links, Buttons, Text Fields, Radio Buttons, Check Boxes, CSS – Syntax, Colors and Background, Text and Fonts, Icons and Links, List.

JavaScript – Syntax, Statements, Variables, Data Types, Operators, Events, JS Forms – Forms API, JS Objects – Object Definition, Object Properties, Object Methods, Object Prototypes, JS Functions – Function Definition, Function Parameters, Function Invocation, Function Closures.

Unit V Case Studies 7

Universal Usability: Web Fun for Individuals with Down syndrome, Blind Users Experience The Internet, Using The "Technology as Experience" Framework, Establishing Requirements for a Mobile Learning System, Using

XP to Develop Context-Sensitive Adverts for The Web, Designing Mobile Applications for Multiple Form Factors. Types of Errors – Mistakes, Slips, False Understanding, Slips – Capture Error, Description Error, Loss of Activation, Mode Errors, Strategies: Prevention - Interlock, Lock in, Lockout, Behavior Shaping Constraints, ErrorRecovery -Guidelines, Error Messages. 1. "Human Computer Interaction" by Alan Dix, Janet Finlay, ISBN: 9788131717035, Pearson Education (2004) 2. "Designing the User Interface - Strategies for Effective Human Computer Interaction", by Ben Shneiderman. Pearson Education (2010). **Text Books** 3. The Essential Guide to User Interface Design: An Introduction to GUI Design Principles and Techniques, by Wilbert O. Galitz. Wiley (2007) 1. Usability Engineering: Scenario-Based Development of Human-Computer Interaction, by Rosson, M. and Carroll, J. (2002) 2. The Essentials of Interaction Design, by Cooper, et al., Wiley Publishing(2007) 3. Usability Engineering, by Nielsen, J. Morgan Kaufmann, San Francisco, 1993. ISBN 0-12-518406-9 **Reference Books** 4. The Resonant Interface: HCI Foundations for Interaction Design, by Heim, S., Addison-Wesley. (2007) 5. Usability engineering: scenario-based development of human-computer interaction, By Rosson, M.B & Carroll. J.M., Morgan Kaufman. Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	By the end of this course, the students can outline about human computer interaction.	2	None
CO2	Students can identify different types of models, design process and interaction styles for developing a good user interface.	2	S
CO3	The students also can list out the different designing tools for UX designers	2	Emp
CO4	Students should be able to Understand the concepts of Views and Layout tools. Various types of Javascript forms and Functions.	2	Emp
CO5	Students should be able to know the case studies by using technologies. Various types of errors, lists and preventions they can be known.	1	Emp

CS3313	Title: Web Programming-CAP II	L 3	T 0	P	C 3						
Version No.	1.0		•	•	<u> </u>						
Course Prerequisites	Nil										
Objective	The main objective of WEB programming is to learn the design principles of internet using its protocols and WEB development languages. The internet is a giant network of networks and WEB allowed information on the internet to be linked together through the use of links. HTML is a language that is used to create web pages for providing information through internet. CSS provides extra effects to the web pages created by HTML. This course will provide basic concepts to create a website using HTML, CSS and XML.										
<b>Expected Outcome</b>	<ul> <li>Design Basic web and responsive web app development.</li> <li>List different Events and Event Handler methods, Access Controls</li> <li>Apply Data storage Concepts and Google Map integration</li> </ul>										
Unit No.	Unit Title				f Hrs Unit)						
Unit I	Introduction to Web Programming			1	5						
introduction, CSS style re JavaScript (Control statement	on, Web fundamentals, Installing IDE for web development, HT ules, CSS3 rules, JavaScript introduction, JavaScript syntax, Javascript, Loops, validations), JavaScript functions, JavaScript Objects	vaSc									
Unit II	Responsive Web Design introduction			1	5						
	ve Web design, Viewport, CSS media query, RWD Patterns, desponsive images, Images in CSS, SVG icons, Optimize image										
Unit III	<b>Event Handler and Access Control</b>			1	5						
Introduction to Event handling, Mouse Events, Touch Events, Front End Networking introduction, Fetch() method, JavaScript Promises, Web Accessibility Fundamentals, Mobile Accessibility, HTTP Access Control, Tab Index, Service Workers, Push Notifications, Payment Request API.											
Unit IV			1	5							
DevTools, Log to console,	ocal Storage, Indexed DB introduction, Indexed DB API, Testing, Debugging Service Workers, Google Maps, Mobile Web Fore Validation, Data Form Validation.										
<b>Mode of Evaluation</b>	Internal and External Examination

Version No.	1.0							
<b>Course Prerequisites</b>	Nil							
Objectives	The students will be able to:  • Analyze a web page and identify its elements and attributes. Create web pages using XHTML and Cascading Style Sheets. Build dynamic web pages using JavaScript							
Expected Outcome	<ul> <li>Develop web pages using HTML and Cascading Styles sheets</li> <li>Develop a dynamic web pages using JavaScript</li> <li>To develop an ability to design and implement static and dynamic website</li> </ul>							

#### **List of Experiments**

- 1. Design a web page to capture the user information such as name, gender, mobile number, mail id, city, state, and country using form elements.
- 2. Design a web page with nice formatting like background image, text colors and border for text using external CSS.
- 3. Design a web page to display timer in the web page using Java Script with Mostly fluid pattern.
- 4. Design web page to implement Responsive images, Images in CSS, SVG icons.
- 5. Create a simple registration web page and perform all Mouse Events.
- 6. Create a login page and demonstrate different touch events.
- 7. Create a web page to show log cat, different debugging options and steps.
- 8. Design web page with HTML Forms and perform different operations.
- 9. Create simple registration page and do HTML5 Client Side Validation.

CS3403	Title: Object Oriented Programming Language and Systems with Java	L T P C 3 0 0 3									
Version No.	1.0	3 0 0 3									
Course Prerequisites	Nil										
Objective Objective	This course provides an introduction to object oriented the Java programming language. Its main objective is and techniques which form the object oriented program	to teach the basic concepts									
<ul> <li>The student should be able to understand the use of OOPs concepts.</li> <li>The student should be able to solve real world problems using OOP techniques</li> <li>The student should be able to develop and understand exception handling, multithreaded applications with synchronization.</li> <li>The student should be able to design GUI based applications</li> <li>The student should be able to understand the use of File I/O</li> </ul>											
Unit No.	Unit Title	No. of Hrs (Per Unit)									
Unit I	Object-Oriented thinking	8									
A way of viewing world – Agents and Communities, messages and methods, Responsibilities, Classes and Instances, Class Hierarchies- Inheritance, Method binding, Overriding and Exceptions, An Overview of Java, Data types, Variables and Arrays, operators, expressions, control statements, Introducing classes, Methods and Classes, String handling.											
Unit II	Inheritance	7									
Inheritance concept, Inheritance basics, Member access, Constructors, Creating Multilevel hierarchy, super uses, using final with inheritance, preventing inheritance, Polymorphism-ad hoc polymorphism, pure polymorphism, method overriding, abstractclasses.											
Unit III	Packages Exception Handling & Multithreading	7									
Handling: Benefits of exception and unchecked exceptions, usa specification, built in exceptions processes and multiple threads, t	accessing a package, understanding CLASSPATH, imp handling, the classification of exceptions, exception hie ge of try, catch, throw, throws and finally, rethrow creating own exception sub classes. Multithreading: Di hread states, creating threads, interrupting threads, threa on. The Collections Framework (java.util)	rarchy, checked exceptions ring exceptions, exception fferences between multiple									
Unit IV	Stream based I/O (java.io)	7									
	and Character streams, Reading console Input and Wr Random access file operations, The Console class, Seriali

CS3440	Title: Object Oriented Programming Language and Systems with Java Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	This course is introduced to understand the basic concepts of Java, Clas flow of control, classes, methods, objects, arrays, exception handling, reuser interfaces (GUIs). Writing and testing applets for potential inclusion. Understanding how to access enterprise data bases from the application	ecursion, and graphical on in web pages.
<b>Expected Outcome</b>	<ul> <li>Students should be able to understand about class and object, a constructor, and overload the Constructors with instantiating it</li> <li>Students should be able to understand about polymorphism usi and also able to implement polymorphism.</li> <li>Students should be able to implement the concept of threading Class and Runnable Interface.</li> </ul>	s object. ing methods in JAVA
	List of Evnariments	

### **List of Experiments**

- 1. Use Eclipse or Net bean platform and acquaint with the various menus. Create a test project, add a test class, and run it. See how you can use auto suggestions, auto fill. Try code formatter and code refactoring like renaming variables, methods, and classes. Try debug step by step with a small program of about 10 to 15 lines which contains at least one if else condition and a for loop.
- 2. To write a program in JAVA to implement the concept of Call by Address and Call by Value.
- 3. Write a program to implement array using JAVA.
- 4. Write a JAVA Program to define a class, describe its constructor, overload the Constructors and instantiate its object.
- 5. Write a Java Program to define a class, define instance methods for setting and retrieving values of instance variables and instantiate its object.
- 6. Write a program to implement polymorphism using methods in JAVA.
- 7. Write a program to implement packages and interface in JAVA.
- 8. Write a JAVA program to practice using String class and its methods.
- 9. Write a program to implement the concept of threading by extending Thread Class
- 10. Write a program to use classes of collection framework.

CS3442	Title: Computer Network Lab	L T P C 0 0 2 1					
Version No.	1.0						
<b>Course Prerequisites</b>	Nil						
Objectives	Lab provides a practical approach to Ethernet/Internet networking: networks are assembled, and experiments are made to understand the layered architecture and how do some important protocols work.						
<b>Expected Outcome</b>	Understand the structure and organization of computer networks; including the division into network layers, role of each layer, and relationships between the layers. Understand the basic concepts of application layer protocol design; including client/server models, peer to peer models, and network naming.						
List of Experiments							

- 1. Study of different 2 Network Cables and Network Interfaces.
- 2. Study & Implementation of IP Addressing & Sub Netting Concept.
- 3. Study & Implementation of Basic Network Commands and Network Configuration Commands.
- 4. Installation of Network Simulator (NS2).
- 5. Installation of Packet Tracer Tool.
- 6. Configure a Network Topology with Packet Tracer Tool.
- 7. Simulate a small Network using Network Simulator (NS2) Tool.
- 8. Write a program to simulate Bit-Stuffing Data Framing Techniques.
- 9. Write a program to simulate Char-Stuffing Data Framing Techniques.
- 10. Write a program to simulate Hamming Code (7-Bit) Error Control Technique.

<b>Mode of Evaluation</b>	Internal and External Examinations
Recommendation by Board of Studies on	14-05-2022
Date of approval by the Academic Council	20-10-2022

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Learn about basics of computer networking and IP addressing.	2	Emp
	Students should be able to Analyse different simulation tools such as NS2	2	Emp
CO3	Students should be able to Learn about framing technique	2	Emp

### **CSE-DS Specialization**

CS3409	Title: Intermediate Level -CTP	L T P C										
	(Data Science)	3 0 0 3										
Version No.	1.0	1.0										
Course Prerequisites	Beginner level CTP											
Objective	<ul> <li>Infer NumPy concepts for performing data wrangling and computational tasks in Python.</li> <li>Understand the concepts of Pandas to generate various data structures.</li> <li>Make use of exploratory data analysis using its different methods, and</li> <li>Analyze visualization techniques using Pandas through different types of plots.</li> </ul>											
Expected Outcome	<ul> <li>Use NumPy to perform common data wrangling and computational tasks in Python.</li> <li>Employ the concepts of Pandas to create and manipulate data structures like Series and Data Frames.</li> <li>Describe exploratory data analysis through its various techniques.</li> <li>Implement visualization concepts through line plot, bar plot, etc. using Pandas.</li> </ul>											
Unit No.	Unit Title	No. of Hours: (Per Unit)										
Unit I	Introduction to Numpy	12										

NumPy Basics: Arrays and Vectorized Computation, The NumPy ndarray, creating ndarrays, Data Types for ndarrays- Arithmetic with NumPy Arrays, Basic Indexing and Slicing, Boolean Indexing, Transposing Arrays and Swapping Axes.

Universal Functions: Fast Element-Wise Array Functions, Mathematical and Statistical Methods, Sorting Unique and Other Set Logic.

Unit II	Data Manipulation with Pandas	13

Introduction to pandas, Data Structures: Series, Data Frame, Essential Functionality: Dropping Entries Indexing, Selection, and Filtering- Function Application and Mapping- Sorting and Ranking.

Summarizing and Computing Descriptive Statistics- Unique Values, Value Counts, and Membership. Reading and Writing Data in Text Format.

Unit III	Data Cleaning, Preparation and	15

### Visualization

Data Cleaning and Preparation: Handling Missing Data, Data Transformation: Removing Duplicates, Transforming Data Using a Function or Mapping, Replacing Values, Detecting and Filtering Outliers- String Manipulation: Vectorized String Functions in pandas.

Plotting with pandas: Line Plots, Bar Plots, Histograms and Density Plots, Scatter or Point Plots.

<b>Unit IV</b>	Exploring Data Analysis using	20
	Python	

Exploring Data Analysis, The EDA Approach, Defining Descriptive Statistics for Numeric Data, Measuring central tendency, Measuring variance and range, Working with percentiles, Defining measures of normality, Counting for Categorical Data, Understanding frequencies, Creating contingency tables, Creating Applied Visualization for EDA, Inspecting boxplots, Performing t-tests after boxplots, Observing parallel coordinates, Graphing distributions, Plotting scatterplots, Using covariance and correlation, Using nonparametric correlation, Considering chi-square for tables, Using the normal distribution, Creating a Z-score standardization, Transforming other notable distributions, Detecting Outliers in Data, Clustering, Reducing dimensionality.

Lab Activity: Implement python script to read data from following file and keep them as numpy arrays and find out mean, standard deviation) ( Data File: <a href="https://archive.ics.uci.edu/ml/datasets/Adult">https://archive.ics.uci.edu/ml/datasets/Adult</a>)

Lab Activity: Implement python script to read data from following file as pandas data frame and summarize the data) (Data File: <a href="https://archive.ics.uci.edu/ml/datasets/Adult">https://archive.ics.uci.edu/ml/datasets/Adult</a>))

Lab Activity: Implement python script to read data from following file and draw the line plots, scatter plot on each column) Data File: <a href="https://archive.ics.uci.edu/ml/datasets/Adult">https://archive.ics.uci.edu/ml/datasets/Adult</a>)

Lab Activity: Implement python script to read data from following file and find descriptive statistical measures on appropriate columns. Specific descriptive statistical measure are: Arithmetic, Geometric, Harmonic Mean, Median for grouped data, standard deviation, and variance. Also perform chi-square test for the dataset.) Data File: https://archive.ics.uci.edu/ml/datasets/Adult)

CS3448	Title: Android Application Development-CAP III Lab	LTPC 0021							
Version No.	1.0								
<b>Course Prerequisites</b>	Nil								
Objectives	The student will learn the basics of Android platform, get to understand the application frontiers and able to design his own applications.								
<b>Expected Outcome</b>	Develop an android application using UI and Layouts								
	Create an android application using multiple activities								
	Create an android application implement intent methods								
	List of Experiments								

- Install android studio and configure AVD, Hello World Android Application and show Hello Toast messages. 1.
- Create Android Application show Activity Life cycle methods, Create Android Application with Multiple Activities and implement intent methods
- Create Android Application for user registration with nice UI
- Create android application with TextView, EditText, Button, ScrollView.
- Create any Android Application with nice UI using different layouts (Linear, Relative, Constraint Layout)
- Create android application with Option Menu, Context Menu, Popup Menu TimePicker, DatePicker.
- Create android application with Toast messages and different Dialog boxes.
- Create any Android Application implement Contents provider
- Create android application to get phone contacts and call logs
- 10. Create android application with user registration and login option with SQLite

CS3541	Title: Design and Analysis of Algorithm Lab	LTPC 0021
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	Implement Dynamic Programming algorithm for the Opt Problem, to solve problems using divide and conquer strabacktracking strategy.	
<b>Expected Outcome</b>	<ul> <li>student should be able to identify the problem using various algorithm design techniques.</li> <li>Students can implement various algorithms in a student should be analyze the performance of various algorithms.</li> </ul>	high level language.

- 1. Write a program to implement Quick sort algorithm for sorting a list of integers in ascending order
- 2. Write a program to implement Merge sort algorithm for sorting a list of integers in ascending order.
- 3. Write a program to implement the bfs & dfs algorithm for a graph.
- 4. Write a. program to implement Floyd-Warshall Algorithm.
- 5. Write a program to implement backtracking algorithm for the N-queens problem.
- 6. Write a program to implement the backtracking algorithm for the sum of subsets problem.
- 7. Write a program to implement the backtracking algorithm for the Hamiltonian Circuits problem.
- 8. Write a program to implement Knapsack Problem.
- 9. Write a program to implement Dijkstra's algorithm & Bellman ford for the Single source shortest path problem.
- 10. Write a program that implements Prim's & Krushkal's algorithm to generate minimum cost spanning tree.

Unit-wise Course Outcome	Descriptions	BL Leve	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Know about the History of the Internet and World Wide Web-HTML, gain the knowledge of protocols – HTTP, SMTP, POP3, MIME, IMAP. Domain Name Server, Web Browsers and Web Servers.		Emp
CO2	Students should be able to understand about List, Tables, Images, Forms, Frames, CSS Document typedefinition, Dynamic HTML, XML schemes, Object Models, Presenting XML, Using XML Processors: DOM and SAX, Introduction to Java Script, Object in Java Script, Dynamic HTML with Java Script.		Ent
CO3	Students should be able to get the knowledge of about Web Services, UDDI, SOAP, WSDL, Web Services Architecture, Developing and deploying web services. Ajax – Improving web page performance using Ajax, Programming in Ajax. CORBA		S
CO4	Students should be able to gain the knowledge of Interactive and social web: Blogs, wikis, and social networking sites – The technology behind these applications- AJAX, RSS and syndication, Ruby on Rails, Open APIs		Emp
COS	Students should be able to Introduce to Semantic Web, Widgets, drag & drop mashups (I Google) - The technology behind these applications- RDF Web based Information Systems, Search engines, Recommender Systems, Web Mining.		Emp

Version No.	1.0								
<b>Course Prerequisites</b>	Nil								
Objectives	Deepen your knowledge of advanced feature syntax and SDK. Be able to put into use the Java language to build and compile robust applications.	e advanced features of the							
<b>Expected Outcome</b>	Students will design and implement programs in the Java programming language that make strong use of classes and objects.								
programming language that make strong use of classes and objects.  List of Experiments									

- Installation and configuration of Apache server
- Development of static website of an online Departmental Store. The website should be user friendly and should have the following pages:
  - Home page
  - Registration and user login
  - User profile page
  - Items catalog
  - Shopping cart
  - Payment by credit card
  - Order confirmation
- Add validations to the above site for registration, user login, user profile and payment by credit card using Java Script.
- Develop the Password Validations form using Java Script.
- Design the Static Web Site or pages using HTML and DHTML for Quantum University.
- Design the Dynamic Web Site or pages using XML, Java Script and Servlet for Quantum University.
- Installation and configuration of TOMCAT web server. Convert the static web pages of into dynamic web pages using servlets and cookies.
- Creation of a XML document of 20 students of Quantum University. Add their roll numbers, marks obtained in 5 subjects, total and percentage and save this XML document at the server. Write a program that takes students' roll number as an input and returns the student's marks, total and percentage by taking the students' information from the XML document.
- Design a website using existing web services (Google map, weather forecast, market information etc.) using AJAX.

Design a web form for online Registration and stored as well as retrieved the data to/from the database.

	The student should be able to Know the built-in function parametric testing of hypothesis in R.	s for graphs and non-
Unit No.	Unit Title	No. of Hrs (Per Unit)
Unit I	Introduction to R Environment	7
creating new working directory, of available packages, calling the in	atistical computing programming language, installing R and R studio, get changing existing working directory, understanding the different data typ stalled packages, arithmetic operations, variable definition in R, simple fits, matrix calculation and manipulation using matrix data types, workspaces	es, installing the unctions, vector
Unit II	Data Structures and Control Statements	8
the lists, adding and deleting the matrix, generating a covariance re combining data frames, special ty frames, control statements, loops	es, vectors, atomic vectors, types and tests, coercion, lists, list indexing, f elements of lists, attributes, name and factors, matrices and arrays, matrix natrix, applying function to row and column of the matrix, data frame – c types in data frames, operations in data frame, applying functions: lapply(, looping over non vector sets, arithmetic and Boolean operators and valuatoric tructure, looping with <b>while</b> , vector based programming.	a indexing, filtering on reating, coercion, ) and sapply() on data
Unit III	I/O Operations and String Manipulations	7

Introduction to I/O functions in R, accessing I/O devices, using of scan(), readline () function, comparison and usage of scan and readline function, reading different format files into R: text file, CSV file, Statistical package files, xls and xlsx files, reading data frame files, converting from one format to another using in built function, writing different file format in to the local machine directory, getting file directory information, accessing the internet: overview of TCP/IP, sockets in R, basics of string manipulations – grep (), nchar (), paste(), sprintf(), substr(), regexpr(), strsplit(), testing of file name with given suffix

Unit IV

R for Summary Statistics and Parametric Tests

7

Descriptive statistics – summary statistics for vectors making contingency tables creating contingency tables from vectors

Descriptive statistics – summary statistics for vectors, making contingency tables, creating contingency tables from vectors, converting objects in to tables, complex flat tables, making 'Flat' contingency tables, testing tables and flat table objects, cross tables, testing cross tabulation, recreating original data from contingency tables, switching class, mean (arithmetic, geometric and harmonic), median, mode for raw and grouped data, measure of dispersion – range, standard deviation, variance, coefficient of variation, testing of hypothesis – small sample test, large sample test – for comparing mean, proportion, variance (dependent and independent samples), correlation and regression – significance of correlation and regression coefficients

Unit V R for Graphs, Nonparametric Tests and ANOVA 7

Introduction to graphs, Box-Whisker Plot, Scatter plots, pairs plots, line chart, Pie Chart, Cleveland Dot Charts, Bar Charts, Customization of charts, non-parametric test: The Wilcoxon U-Test (Mann-Whitney): One and Two-Sample U-Test, Tests for association: Chi Square Tests, Monte Carlo simulation, Yates Correction for 2X2 Tables, single category goodness of fit tests, Analysis of Variance for one-way variation and two variation – with and without interaction,

Analysis of Variance for one-way	variation and two variation – with and without interaction,

		0 0 2 1
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	<ul> <li>To understand the basic concepts of R pro</li> <li>To understand the data structures in R pro</li> <li>To understand the important packages language.</li> </ul>	ogramming language.
Expected Outcome	<ul> <li>Students should be able to understand the language.</li> <li>Students should be able to understand the language.</li> <li>Students should be able to understand the in R programming language.</li> </ul>	e data structures in R programming
	List of Experiments	

#### Exercise -1

- 1. Install and configure R, set working directory.
- 2. Install Packages and calling installed packages
- 3. R studio environment and functionalities of R studio
- 4. Implement basic R operations (data input, missing values, importing data into R using different formats: xlsx, CSV, Text files)
- 5. Use R as a calculator
- 6. Explore various functionalities of dataframes.

- 7. Create data set using data frames, list and tables.
- 8. Calculate the remainder after dividing 31079 into 170166719
- 9. Calculate the interest earned after 5 years on an investment of \$2000,
- 10. Assuming an interest rate of 3% compounded annually.
- 11. Use R to calculate the area of a circle with radius 7 cm.
- 12. Do you think there is a difference between 48:14² and 48:(14²)?
- 13. Usingrep()and seq()as needed, create the vectors?

0000011111222223333344444 and 1234512345123451234512345

1. Create the vector

```
## [1]00011110001111000111100011
## [34] 1 1
```

and convert it to a factor. Identify the levels of the result, and then change the level labels to obtain the factor:

## [1] Male Male Male Female Female Female Male Male

## [10] Male Female Female Female Male Male Male Female

## [19] Female Female Female Male Male Female Female Female

## [28] Female Male Male Female Female Female Female

## Levels: Male FemaleExplore various functionalities of plots

#### Exercise -2

- 1. Create the contingency table for the given raw data.
- 2. Create the interactive user input code line in r using readline ( ) function.
- 3. Create the contingency table for the given vector format data.
- 4. Convert the contingency table to original format of the given data.
- 5. Analyse and give interpretation of summary statistics for the given data.
- 6. Calculate mean, median and mode for the grouped data and compare the results for the given data.
- 7. Analyse the given data for non-parametric tests and give the interpretations.
- 8. Use R for test the given data

In order to compare the effectiveness of two sources of nitrogen, namely ammonium chloride (NH4Cl) and urea, on grain yield of Coarse cereal, an experiment was conducted. The results on the grain yield of Coarse Cereal (kg/plot) under the two treatments are given below.

NH4C1: 13.4, 10.9, 11.2, 11.8, 14.0, 15.3, 14.2, 12.6, 17.0, 16.2, 16.5, 15.7.

Urea: 12.0, 11.7, 10.7, 11.2, 14.8, 14.4, 13.9, 13.7, 16.9, 16.0, 15.6, 16.0.

Assess which source of nitrogen is better for Coarse Cereal.

1. Use R to test the given data and interpret the results.

In a health survey of school children, it is found that the mean hemoglobin level of 55 boys is 10.2 per 100ml with a SD of 2.1. Can we consider this group as taken from a population with a mean of

11.0 g/100ml?

- 1. In a hearing survey among 246 town school children, 36 were found with conductive hearing loss and among 349 village school children 61 were found with conductive hearing loss. Does this present any evidence that conductive hearing loss is as common among town children as among village children?
- 1. In an experiment to compare two types of Goat foods A and B, the following results of increase in weight were observed in Goats.

Pig No.	1	2	3	4	5	6	7	8
Increase in weight due to A	49	53	51	52	47	50	52	53
Increase in weight due to B	52	55	52	53	50	54	54	53

Assuming the two samples are independent can we conclude food B is better than food A?

- 1. Before an increasing in exercise duty on tea, 800 persons out of a sample of 1000 persons were found to be tea drinkers. After an increasing in duty, 800 people were tea drinkers in a sample of 1200 people. Using SE of a proportion, state whether there is a significant decrease in consumption of tea after the increase in the exercise duty.
- 1. Use R for test the given data

A health status survey in a few villages revealed that the normal serum protein value of children in that locality is 7.0 g/100ml. A group of 16 children who received high protein food for a period of six months had serum protein values shown below. Can we consider that the mean serum protein level of those who were fed on high protein diet is different from that of the general population?

S.No.	1	2	3	4	5	6	7	8
(Child No.)								
Protein level (g%)	7.10	7.70	8.20	7.56	7.05	7.08	7.21	7.25
S.No.	9	10	11	12	13	14	15	16
(Child No.)								
Protein level (g%)	7.36	6.59	6.85	7.90	7.27	6.56	7.93	8.56

1. Students were selected to training. Their performance was noted by giving a test and the marks recorded out of 50. They were given effective 6 months training and again they were given a test and marks were recorded out of 50.

Farmers	1	2	3	4	5	6	7	8	9	10
Before training	25	20	35	15	42	28	26	44	35	48
After training	26	20	34	13	43	40	29	41	36	46

By applying the t-test can it be concluded that the students have benefited by the training?

1. 100 individuals of a particular race were tested with an intelligence test and classified into two classes. Another group of 120 individuals belong to another race were administered the same intelligence test and classified into the same two classes. The following are the observed frequencies of the two races:

	Race		Intelligence	
		Intelligent	Non-intelligent	Total
	Race I	42	58	100
	Race II	55	65	120
Test whether th	Total e intellige	97 ence is anyth	ing to do with the	220 race.

1. Obtain the correlation coefficient between the heights of father(X) and of the son (Y) from the following data

X	65	66	67	68	69	70	71	72
Y	67	68	65	68	72	72	69	71

- And also test its significance. Using R functions.
- 1. Analyse the given data for analysis of variance and interpret the same for all the possible values.
- 1. Consider the inbuilt data set cars.
  - Find Correlation between possible variables and pairwise correlation
  - Find regression line between appropriate variables
  - Display the summary statistics and comment on the results

Version No.	1.0
<b>Course Prerequisites</b>	Nil
Objective	To have practical knowledge on designing RPA solutions. systems, and the processes that are used to build them;"
<b>Expected Outcome</b>	<ul> <li>To understand the basics of RPA tools used in the industry.</li> <li>To understand what RPA process.</li> <li>To understand UI and tool windows.</li> <li>To understand the packages installed for automatic specific targets.</li> </ul>

Unit No.	Unit Title	No. of Hrs
		(Per Unit)
Unit I	Understanding Common Agile Practices in DevOps	9

Introduction to Product Management, Product Design and Requirement gathering, Product Design Challenges, UX Design, Product Development Methodologies, Product Marketing and Presentation, Traditional Software Development Methodologies, Problem/issues with traditional approach, Agile Development, Agile Manifesto, Scrum Model, Agile Estimations and Planning, Soft skills in agile. What is Kanban, Understanding the Principle of Kanban, Value System of Kanban, WIP Limits, Classes of Service in Kanban, Sample Kanban Boards (Proto Kanban), How to read a Kanban Board, Meetings in Kanban System, Extreme Programming.

Unit II Code Design 9

Good design is good design regardless of paradigm, Fundamental characteristics of good design: modular, loosely coupled, Using design to simplify code structure, How programming languages are designed to support good code design, Best practices of design in OO program development, First Fundamental OO principle: Interface and implementation design, Second Fundamental OO Principle: Recursive design, Design Patterns: reusing best practices, SOLID Design Principles

Unit III Testing and Debugging: 7

Planning for errors and exceptions, Basic test-driven development: writing tests first, How TDD improves the quality of the resulting code, Automating testing: using Junit, Avoiding creeping errors..

Unit IV Refactoring - Improving Structure 7

Code smells: symptoms of poorly designed code, Refactoring: changing code structure without changing functionality, Using TDD for controlled code changes, The refactoring process, Using refactoring to make better code faster, Collective Code Ownership, Common frameworks and code architectures: Spring, Hibernate, Microservices, Spring Boot, How much should your code rely on third party code, IDEs: Eclipse, Visual Studio, IntelliJ, etc.: the good and bad of an IDE, Avoiding common mistakes with IDEs E. The issue of making code IDE, Dependent.

Unit V Code Structure 7

Classes, packages and methods: building clocks of code, Organizing code: the size of methods and classes, What makes

Classes, packages and methods: building clocks of code, Organizing code: the size of methods and classes, What makes methods and classes "good", Conceptual objects, using metaphors to make code understandable, Kinds of objects: data transfer objects, data structures, functional structures, Using standardized algorithms and libraries, Designing and using easily maintained structures, Overview of best practices in structure: law of Demeter, Open close

<b>Course Prerequisites</b>	Nil					
Objective	the Java programming language. Its main objective is	This course provides an introduction to object oriented programming (OOP) using the Java programming language. Its main objective is to teach the basic concepts And techniques which form the object oriented programming paradigm				
<b>Expected Outcome</b>	<ul> <li>Gain knowledge of iOS Architecture and Xc</li> <li>Gain Knowledge on Objective-C concepts</li> <li>Gain Knowledge on Swift programming</li> <li>Understand MVC and its importance in iOS</li> <li>Understand iOS App UI elements</li> <li>Understand Files and SQLite to Store and Re</li> </ul>	App development				
Unit No.	Unit Title	No. of Hrs(Per Unit)				
Unit I	iOS Navigation and Interface	9				

	Design								
Creating the Xcode Project- Project Settings, Creating the User Interface, Running the App in the Simulator, Adding App									
Behavior, Dismissing the Keyboard- App Icons and Launch Images, Views and Controllers- View Controller, Tab Bar									
Controller, Navigation Controller, Creati	ng the Interface- Creating the Project, Creating the Vie	ews, Design the Contacts							
Screen, Add Navigation Controller for the Date Screen, Activating the Interface.									
Unit II	Persistent Data and Tables in 7								
	OS								

File Data Storage, User Defaults, Core Data, Setting Up Core Data- Creating the Project, Designing Data Structure, Passing Data Between Controllers, Saving Data to Core Data; Storing the Settings- Creating the Settings Interface, Working with NSUser Defaults Object, Activating the Settings Interface, Global Constants, Setting Up Tables- Populate the Table with Data, Retrieve Data from Core Data, Adding Contact Data, Display Detailed Data, Save Changes to Records, Deleting Records, Accessory Buttons, Alert View, Show Subtitles in the Table, Sort the Table.

UnitIII	Maps, Location and Access to	7
	Hardware	

Overview of Location and Mapping- Hardware and Sensors, Core Location, MapKit, Adding Location Information to the App- Finding Location, Adding a Map. Access to Hardware and Sensors in iOS - Getting Device Information, Monitoring Battery Status, Controlling the Camera, calling a Phone Number- Long Press Gesture, Adding Long Press to Enabled Text Field; Using Core Motion for Accelerometer Data.

UnitIV Monetizing and Publishing 7
Apps 7

General method, applications-n-queen problem, sum of subsets problem, graph coloring, Hamiltonian cycles. Elementary graphs algorithms, Maximum Flow and Travelling Salesman Problem

UnitV Lab Activity 7

#### Lab Activity:

- 1. Install Xcode and Create Hello world iOS Application
- 2. Create iOS Application Dismiss the Keyboard- change App Icons and Launch Images
- 3. Create iOS Application using View Controller, Tab Bar Controller, Navigation Controller
- 4. Create iOS Application Pass the Data Between Controllers
- 5. Create iOS application to capture the user information such as name, gender, mobile number, mail id, city, state, and country with nice UI and save the data Lab Activity:
- 6. Create iOS Application implement the map kit and display current location
- 7. Create iOS Application demonstrate how to Access the Hardware and Sensors in iOS Getting Device Information
- 8. Create iOS application to Monitoring Battery Status Controlling the Camera

CS3549	Title: Project Based Learning using JAVA Lab	LTPC 0042
Version No.	1.0	
<b>Course Prerequisites</b>	Nil	
Objectives	The student will learn the basics of Project Based Learning using JAV	'A
<b>Expected Outcome</b>	<ul> <li>Analyse the asymptotic performance of algorithms.</li> <li>Write rigorous correctness proofs for algorithms.</li> <li>Demonstrate a familiarity with major algorithms and data st</li> <li>Apply important algorithmic design paradigms and methods</li> <li>Synthesize efficient algorithms in common engineering design</li> </ul>	s of analysis.

### **List of Experiments**

- 1. Develop dynamic web application to display current system date and time using servlets.
- 2. Develop dynamic web application to display login page with proper HTML UI elements using servlets.
- 3. Implement a servlet to authenticate login details, which is created previously (user name and password should be accepted using HTML and displayed using a Servlet)
- 4. Develop dynamic web application to manage product (prodId, name, category, price) details using servlets. This app must have following pages
- 5. Home page
- 6. Product adding page
- 7. Product editing page
- 8. Product displaying page
- 9. Develop dynamic web application to manage user (userId, name, dob, address) details using JSP. This app must have following pages

Home page

User adding page

User editing page

User displaying page

- 10. Write JSP program to implement custom tag with name product>, which display product
  (prodId, name, category, price) details
- 11. Enhance previous JSP program to fetch data from database
- 12. Develop Rich Internet Applications to manage product and user details using struts and database
- 13. Develop Hibernate application to manage product details like insert, update, delete and display from database using HQL
- 14. Develop Spring based dynamic web application to manage courses, students in a college environment using Web MVC framework and JDBC

CS3641	Title: Compiler Design Lab	LTPC						
		0 0 2 1						
Version No.	1.0							
<b>Course Prerequisites</b>	Nil							
Objectives	Explain the importance of compiler design. Design and implementation of lexical analyzer using lex tools. Explain the top down and bottom up parsing techniques using programming. Identify the understanding language peculiarities by designing a complete translator for mini language. Explain that computing science theory can be used as the basis for real applications.							
<b>Expected Outcome</b>								
	List of Experiments							
1. Write a C progr	ram to identify whether a given line is a comment or not.							
2. Write a C program to recognize strings under 'a', 'a*b+', 'abb'.								
3. Write a C program to test whether a given identifier is valid or not.								

- 4. Write a C program to simulate lexical analyzer for validating operators.5. Write a C program for constructing of LL(1) parsing.
- 6. Write a C program for constructing recursive descent parsing.
- 7. Write a C program to implement LALR parsing.
- 8. Write a C program to implement operator precedence parsing.

Identify innovative research directions in Artificial Intelligence. Providing quality education and practical skills to the students and faculty.						
<ul> <li>Students should be able to undersatand about the basic of AI programming languages</li> <li>Students should be able to understand the programming concepts of LISP</li> <li>Students should be able to understand the programming concepts of PROLOG</li> </ul>						
	<ul> <li>1.0</li> <li>Nil</li> <li>Identify innovative research directions in Artificial Intelligence. Providing quand practical skills to the students and faculty.</li> <li>Students should be able to understand about the basic of AI program</li> <li>Students should be able to understand the programming concepts of I</li> </ul>					

- 1. Explain the basic list manipulating functions.
- 2. Define the different basic structure of a function in python.
- 3. Write a program in python to add two numbers.
- 4. Write a program in python to show the use of arithmetic operators.
- 5. Write a program in python to find the factorial of a positive integer.
- 6. Write a program in python to add the elements of a list. With or without inbuilt functions.
- 7. Write a program in python to concatenate two lists with or without inbuilt functions.
- 8. Write a program in python to find nth element of a list.
- 9. Write a program of BFS in python and search an element.
- 10. Write a program of A* search in python and search an element.
- 11. Write a python program which makes use of function to display all such numbers which are divisible by 7 but are not a multiple of 5, between 1000 & 2000.
- 12. Write a python program to check the elements is in the list or not by using linear search or binary search.

CS3648	Title: Advanced Python Programming Lab	LTPC 0042				
Version No.	1.0					
<b>Course Prerequisites</b>	Nil					
Objectives	Identify innovative research directions in Artificial Intelligence. Providing quality education and practical skills to the students and faculty.					
Expected Outcome  Recent advances in computational speed, data storage, data retrieval, sensors, and algorithms have combined to dramatically reduce the cost of machine learning-based predictions.						
List of Experiments						

- 1. Numpy, Pandas, and matplotlib library basic implementation.
- 2. Write a NumPy program to save a given array to a text file and load it.
- 3. Write a NumPy program to create a 3x3x3 array filled with arbitrary values
- 4. Write a NumPy program to convert a given array into a list and then convert it into a list again.
- 5. Write a NumPy program to create a 10x10 matrix, in which the elements on the borders will be equal to 1, and inside 0.
- 6. Write a NumPy program to compute the x and y coordinates for points on a sine curve and plot the points using matplotlib
- 7. Write a Pandas program to get the powers of an array values element-wise.

Note: First array elements raised to powers from second array

Sample data: {'X':[78,85,96,80,86], 'Y':[84,94,89,83,86], 'Z':[86,97,96,72,83]}

**Expected Output:** 

XYZ

0 78 84 86

1 85 94 97

2 96 89 96

3 80 83 72

4 86 86 83

8. Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels. Sample Python dictionary data and list labels:

exam_data = {'name': ['Anastasia', 'Dima', 'Katherine', 'James', 'Emily', 'Michael', 'Matthew', 'Laura', 'Kevin', 'Jonas'],

'score': [12.5, 9, 16.5, np.nan, 9, 20, 14.5, np.nan, 8, 19],

'attempts': [1, 3, 2, 3, 2, 3, 1, 1, 2, 1],

'qualify': ['yes', 'no', 'yes', 'no', 'no', 'yes', 'yes', 'no', 'no', 'yes']}

labels = ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j']

**Expected Output:** 

attempts name qualify score

a 1 Anastasia yes 12.5

b 3 Dima no 9.0

.... i 2 Kevin no 8.0

j 1 Jonas yes 19.0

- 9. Write a Python program to draw a line with suitable label in the x axis, y axis and a title
- 10. Write a Python program to draw a line using given axis values taken from a text file, with suitable label in the x axis, y axis and a title.

Test Data:

 $test.txt1\ 2$

CS3649	Title: Operating System Lab	LTP C 00 2 1				
Version No.	1.0					
<b>Course Prerequisites</b>	Nil					
Objectives	To implement different threats, process scheduling and memo	ory.				
<b>Expected Outcome</b>	.Ability to understand the components of operating system	and interaction among				
	various components.					
List of Experiments						

- 1. Design, develop and execute a program using any thread library to create number of threads specified by the user ,each thread independently generate a random integer as an upper limit and then computes and prints the number of primes less than or equal to that upper limit along with that upper limit.
- 2. Rewrite above program such that the processes instead of threads are created and the number of child processes created is fixed as two. The program should make use of kernel timer to measure and print the real time, processor time user space time and kernel space for each process
- 3. Design, develop and implement a process with a producer thread and a consumer thread which make use of bounded buffer (size can be prefixed at a suitable value) for communication. Use any suitable synchronization construct.
- 4. Design and execute a program to solve a system of n linear equations using Successive Over relaxation method and n processes which use Shared Memory API.
- 5. Design, develop, and execute a program to demonstrate the use of RPC.

CS3647	Title: Data Visualization Techniques Lab	L T P C
		0 0 2 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The student will learn the basics of Data Visualization L.	AB
Expected Outcome	<ul> <li>Understand the fundamental principles of PHP data types, control structures, and functions.</li> <li>Apply PHP and Perl to create and modify web including handling user input, database integrat</li> <li>Analyze the performance and security issues or recommend improvements based on best practice.</li> <li>Evaluate the suitability of PHP and Perl for sp compare their strengths and weaknesses.</li> <li>Create complex web applications and scripts advanced features such as object-oriented programodules.</li> </ul>	applications and scripts, ion, and error handling.  If PHP and Perl code and ces.  ecific programming tasks and  using PHP and Perl, incorporating

#### **List of Experiments**

- 1. For the given data prepare dataset in a suitable format so that data will be available for visualizing in a better way
- 2. The goal of this Lab is to give you some experience with handling and deciding how to visualize some data and for you to get a feel for the various aspects of the visualization.
- 3. Give an overview of the structure of the data, such as basic and summary statistics along with elementary visualization graphs and interpret.
- 4. Give the difference between boxplot and sunflower plot in R. explain the advantage of sunflower plot over boxplot visual methods.
- 5. Create Box-and-Whisker plot for the given variable and interpret the nature of variable based on the graphical representation.
- 6. Exercise -2
- 7. Visualizing relations between two variables
- 8. For the given dataset, find correlogram and interpret in context of explanatory and explained variables.
- 9. Plotting with two continuous explanatory variables: scatterplots, plot for the given variables and find the difference between them
- 10. Cartesian plot(x,y)
- 11. formula plot( $y \sim x$ )
- 12. Use the given third variable to label the scatter plot. Customize the current plot with different visible colors.
- 13. Exercise 3
- 14. Install googleVis package and use this package to create Line Chart, Bar Chart and

Column Chart of a given dataset.

- 15. Create a data frame named "New_DF". Give as variables the "Pnts" (Points) and "Wins" of three chess players. Names and values are up to By o Tue.ch. CSE Version 2022
- 16. Create a list named "LineChart" and pass to it the "New_DF" data frame you just created as a line chart
- 17. Use plot function to create line chart
- 18. Create a single axis Line chart that displays only the "Pnts" of the "New_DF" data frame
- 19. Now create a two axis line chart that displays both "Pnts" and "Wins" of the "New_DF" data frame
- 20. Create a list named "BarChart" and pass to it the "New_DF" data frame you just created as a bar chart
- 21. Use plot function to create bar chart
- 22. Create a list named "ColumnChart" and pass to it the "New_DF" data frame you just created as a column chart
- 23. Use plot function to create column chart
- 24. Exercise 4
- 25. Generate a histogram for the first column of iris dataset using the plot ly() function.
- 26. For the first run, supply only one argument to the function and see the message it returns. identify the argument that you need to include to specify a chart type.
- 27. Generate a scatter plot for the first two columns of the iris dataset. Identify and use the appropriate arguments to get the plot with first column on the x axis and second column on y axis. Using the color argument, specify the color such that data points are colored based on the Species column.
- 28. Pie chart is an alternative way of representing categorical data, but, when the levels in the data are more, bar chart is preferred. Data has to be prepared in the same way as we do it for bar chart. The arguments vary a little. Instead of x and y, we use labels and values. Generate a pie chart using the same data from the previous exercise and appropriate arguments. Notice how the tick marks and the axes appear behind the chart. For the first column in the iris dataset, generate a box plot using the box trace type. Test is it possible for the last column of iris data set. Login to a server and create a directory to upload assignments
- 29. Use HTML Lists
- 30. Implement hover text
- 31. Mock web site: Page for updating student attendance, transferring attendance data to the server using JSON and querying any student's attendance Students will learn how to
- 32. Create a web page using what they learned

CS3740	Title: System Administration Lab	L T P C 0 0 2 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Explain the importance of Software installation concepts. Unbasics, politics, policies and ethics techniques using program learn Automating Administrative Tasks. Students will Learn and disks, Networking, Configuration management and District computing. Acquaint students with SNMP, NFS Configuration System security	ming. Identify and to manage File systems ibuted
Expected Outcome	<ul> <li>To explain the importance of Software installation conceptor.</li> <li>To Understand Multi-user basics, politics, policies and oprogramming.</li> <li>To Identify and learn Automating Administrative Tasks.</li> <li>Students will Learn to manage File systems and Configuration management and Distributed computing. SNMP, NFS Configuration and monitoring System security.</li> </ul>	ethics techniques using  I disks, Networking, Acquaint students with

- Install and acquaint with Packet Monitoring software (tcpdump, snort, ethereal)
- 2. Perform following operations: Trace route, Ping, Finger, Nmap
- 3. Execute given commands: Server configuration (FTP, SMTP, DNS)
- 4. Perform NFS Configuration
- 5. Implement Firewall Configuration using iptables/ipchains (Linux only)
- Execute Experiments using Turbo C Assembler

Note: All the above experiments may be performed in both Unix /Linux and Windows

CS3748	Title: NoSQL Database Technologies Lab	LTPC 0021				
Version No.	1.0					
<b>Course Prerequisites</b>	Nil					
Objectives	<ul> <li>Understanding the concepts of NoSQL databases.</li> <li>Understanding about basic principles and design criteria of NoSQ</li> <li>Understanding the concepts of different types of NoSQL databases.</li> <li>Understanding about data storage and processing techniques.</li> <li>Applying the various queries used in NoSQL databases.</li> </ul>	L databases.				
Expected Outcome  Identify the basic principles and design criteria of NoSQL databases  Analyze different types of NoSQL databases  Demonstrate different types of features of different NoSQL databases  List different NoSQL databases  Discuss the advantages of NoSQL database over RDBMS						

- 1. Prepare and install infrastructure for setting up MongoDB lab using MongoDB Community Edition.
- 2. Perform / execute basic sets of basic commands on MongoDB lab environment.
- 3. Create a collection and insert a couple of documents into your collection.
- 4. Perform / Execute Finding with Expressions and comparison queries in mongoDB.
- 5. Execute different steps on Count, Limit, Skip & Sort.
- 6. Perform steps on Interacting with cursors
- 7. Perform steps on Inserting / Updating and Deleting data in a collection.
- 8. Perform steps on MongoDB Aggregation Framework.
- 9. Perform steps on Filtering the pipeline with \$match.
- 10. Perform steps on Modifying a stream with \$project.
- 11. Execute JavaScript expressions to find out number of seconds in a week and how many weeks are there in a human lifetime of 80 Years.

## **Program Elective IV**

CS3803	Title: Parallel Computing	L T P C 3 0 0 3					
Version No.	1.0						
<b>Course Prerequisites</b>	Nil						
Objective  Students who elected this course are subjected to study paralle computing hardware and programming models. Will be enabled to be conversant with performance analysis and modeling of paralle programs. Understand the logic to parallelize the programming task and operating system requirements to qualify in handling the Parallelization							
On completion of the course, student will be able to—  • To understand parallel computing hardware and programmin models.  • Will be enabled to be conversant with performance analysis and modeling of parallel programs.  • To Understand the logic to parallelize the programming task and operating system requirements to qualify in handling the parallelization  • Describe different parallel architectures, inter-connect network programming models.  • Develop an efficient parallel algorithm to solve given problem Analyze and measure performance of modern parallel computing systems.

Unit No.	Unit Title	No. of Hrs(PerUnit)						
UnitI	<b>Introduction to Social Media Analytics</b>	9						

Introduction of Unit

History and Evolution of social media, impact of social media in growth of business, Social media and its importance, Various social media platforms, Social media mining.

Challenges for social media mining, Social media mining techniques: Graph mining and text mining, The generic process of social media mining: Getting authentication from the social website, Data visualization R packages,

The simple word cloud, Sentiment analysis Word cloud, Preprocessing and cleaning in R.

Conclusion and Summary of Unit

UnitII Analytics on Twitter

Twitter and its importance, Understanding Twitter's APIs: Twitter vocabulary, Creating a Twitter API connection: Creating a new app.

Finding trending topics, Searching tweets, Twitter sentiment analysis: Collecting tweets as a corpus, Cleaning the corpus, Estimating sentiment

Conclusion and Summary of Unit

UnitIII Analytics on Facebook 7

Introduction of Unit

Introduction, importance of Facebook, Creating an app on the Facebook platform, facebook package installation and authentication, Installation, A closer look at how the package works, A basic analysis of your network. Network analysis and visualization: Social network analysis, Degree, Betweenness, Closeness, Cluster, Communities, Getting Facebook page data, Trending topics analysis, Influencers: based on single post and multiple post.

Masuring CTR performance for a page, Spam detection, Recommendations to friends Conclusion and Summary of Unit

UnitIV Analytics on Instagram 7

Definition and overview Instagram and its role in social awareness, Creating an app on the Instagram platform, Installation and authentication of the insta package, Accessing data from R: Searching public media for a specific hashtag, Searching public media from a specific location, Extracting public media of a user.

Extracting user profile, Getting followers, Getting comments, Number of times hashtag is used, Building a dataset: User profile, User media, Travel-related media, Popular personalities: Who has the most followers? Who follows more people? Who shared most media? Overall top users, Most viral media, Finding the most popular destination.

Locations with most likes, Locations most talked about, Clustering the pictures, Recommendations to the users

UnitV Analytics on GitHub 7

Introduction to GitHub, creating an app on GitHub, GitHub package installation and authentication, Accessing GitHub data, Building a heterogeneous dataset using the most active users, Building additional metrics. Exploratory data analysis, EDA – graphical analysis: Which language is most popular among the active GitHub users? What is the distribution of watchers, forks, and issues in GitHub? How many repositories had issues? What is the trend on updating repositories? Compare users through heat map, EDA – correlation analysis: How Watchers is related to Forks, Correlation with regression line, Correlation with local regression curve. Correlation on segmented data, Correlation between the languages that user's use to code, how to get the trend of correlation?

# **Program Elective V**

CS3807	Title: Fault Tolerant Computing	LTPC 3003							
Version No.	1.0	3 0 0 3							
Course Prerequisites	None								
Dependability is now a major requirement for all computing systems and applications. Computer hardware, software, data, networks and systems are always subject to faults. The faults cannot be eliminated, however their impact can be limited and a suitably designed fault-tolerant system can function even in the presence of faults. This cour introduces the widely applicable concepts in reliable and fault-tolerant computing. Topics to be covered include basic testing concepts, hardware and software faults, reliability evaluation, design and evaluation of redundant systems, relationship between testing and reliability, software reliability growth, security vulnerabilities and emerging issues.  Expected Outcome  The course will provide the students a background so that the can: understand techniques to model faults and know how generate tests and evaluate effectiveness;									
Unit No.	<ul> <li>evaluate reliability of systems with permanent and tempo faults; determine applicability of these forms of redundato enhance reliability: spatial, temporal, procedural;</li> <li>assess the relation between software testing and residuefects and security vulnerabilities, devise and ana potential solutions for emerging issues.</li> </ul>

- Risk Assessment: Identification / Analysis / Prioritization
- Risk Control: Planning / Resolution / Monitoring Failure Mode and Effects Analysis (FMEA) –
- Defect Management Cost Management.
- Software Metrics Classification of Software Metrics: Product Metrics: Size Metrics, Complexity Metrics, Halstead's Product Metrics, Quality Metrics, and Process metrics.
- Conclusion of Unit

Unit V Project evaluation and emerging trends 6

- Introduction of Unit
- Strategic Assessment–Technical Assessment–Cost Benefit Analysis–Cash Flow Forecasting–Cost Benefit
- Evaluation Technique–Risk Evaluation–Software Effort
- Estimation. Emerging Trends: Import of the internet on project Management –people Focused Process Models.
- Conclusion of Unit

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Understand the fundamental design principles and different types of data visualization.	2	Emp
CO2	Identify both positive and negative impacts of data-informed decision across a variety of domains.	2	Emp
CO3	Apply the fundamental concepts of data visualization to define a project in your field of study.	2	Emp
CO4	Practice the core principles using widely available tools (e.g. Tableau).	2	Emp
CO5	Demonstrate the best practice that presents your story in the process of creating data visualization including connecting to different data sources, assessing to the quality of the data, and converting raw data into data visualizations that provide actionable information.		Emp

		3 0 0 3									
Version No.	1.0	<u> </u>									
<b>Course Prerequisites</b>	Knowledge on Basic Mathematics.										
Objective	This course aims to make students understand S	This course aims to make students understand Sampling Methods									
	To understand the basic concepts and important enumeration.	1 0 1									
<b>Expected Outcome</b>	<ul> <li>To understand the procedure for proportions and percentage in selecting samples.</li> <li>To understand the importance and estimation of mean and variance of simple random sampling.</li> </ul>										
To understand the importance and estimation of mean and variance of strate and systemic random sampling.      To understand the importance and estimation of mean and variance of clusters.											
	sampling for equal and unequal clusters.										
Unit No.	Unit Title	No. of Hrs(PerUnit)									
UnitI	Introduction to Sampling	9									

Introduction, important terminologies related with sampling methods: samples, population, standard error, sampling distribution, sample size, need for sampling, advantages and disadvantages of sampling, important principle steps in sample survey, sample survey vs complete enumeration, the role of sampling theory, probability sampling, alternative to probability sampling, importance of normal distribution in sampling theory, bias and its effects in sampling process, role of mean square error in sampling theory.

#### UnitII Sampling proportions and Percentages

Introduction, Qualitative characteristics of samples, variances of the sample estimates, the effect of P on the standard errors, probability distribution function: the binomial probability distribution, the hypergeometric distribution, confidence limits, classification into more than two classes, confidence limits with more than two classes, the conditional distribution of p, proportions and totals over subpopulation, comparison between different domains.

#### UnitIII Stratified and Systemic Random Sampling 7

Introduction, need for simple random sampling, overview and definition of simple random sampling with and without replacement, selection of a simple random sample, definitions and notations conventions in simple random sampling, properties of the estimates, variances of the estimates, the finite population correction, estimation of standard error from the samples, confidence limits, estimation of a ratio, estimates of means over subpopulation, estimates of totals over sub population, comparison between domain means, validity of normal approximation, linear estimates of the population mean.

#### UnitIV Transportation and network models

Definition and overview of stratified and systemic random sampling, properties of the estimates, estimated variance and confidence limits, proportional allocation, optimum allocation, Neyman Allocation, relative precision of 21 stratified sampling over simple random sampling, allocation requires more than 100 percent sampling, , Choice of Sample Sizes in Different Strata, advantages and disadvantages of stratified sampling, Systematic Sampling: The Sample Mean and its Variance, Comparison of Systematic with Random Sampling, Comparison of Systematic with Stratified Random Sampling, Estimation of the Variance, two stage sample with equal and unequal units.

#### UnitV Cluster Sampling

Equal Clusters: Introduction, definition, efficiency of cluster sampling, Efficiency of Cluster Sampling in Terms of Intra-Class Correlation, Estimation from the Sample of the Efficiency of Cluster Sampling, Relationship between the Variance of the Mean of a Single Cluster and its Size, Optimum Unit of Sampling and Multipurpose Surveys, Unequal Clusters: Estimates of the Mean and their Variances, Probability Proportional to Cluster Size: Estimate of the Mean and its Variance, Probability Proportional to Cluster Size: Efficiency of Cluster Sampling, Probability Proportional to Cluster Size: Relative Efficiency of Different Estimates.

CS3713	Title: Time Series Analysis and Forecasting	LTPC 3003
Version No.	1.0	<u>'</u>
<b>Course Prerequisites</b>	: Knowledge on Statistics and Financial Data	
Objective	This course aims to make students understand Tim	e Series Analysis
Expected Outcome	To understand the basic concepts of time series and  • To understand the elementary time series models techniques.  • To understand the integration process of non-stat  • To understand the importance of ARMA and AR  • To understand the basic concepts and estimation	and model evaluation ionary data set. IMA models for forecasting.
Unit No.	Unit Title	No. of Hrs(PerUnit)
UnitI	Introduction to Time Series Analysis	9

Introduction to time series plot in history, time series data and cross sectional data, difference between time series and cross sectional data, time series and stochastic process, means, variances, covariance, stationarity, importance of stationarity in time series analysis, components of time series analysis: trend, seasonal, cyclical and irregular, white noise process, random walk, elementary time series models with zero mean, model evaluation techniques: Bias, MAD, MSE, MAPE

UnitII Univariate time series analysis – I

Models related to stationary data, Auto Regressive model, Moving Average model, Stationarity of data, concepts on unit root, impacts of unit root in estimating the model parameters, tests related to unit root: Dickey Fuller test, Augmented Dickey Fuller test, KPSS Test, The Phillips Peron Test, seasonal unit roots, periodic integration and unit root testing.

UnitIII Univariate time series analysis – II

ARMA (p,q) process, ACF (Auto Correlation Function) and PACF (Partial Auto Correlation Function) of an ARMA (p,q) process, forecasting ARMA process, integration of non-stationary data, first order integration and second order integration, ARIMA (p,i,q), estimation of parameters of ARIMA model, Wald Test Statistic for significance of coefficients.

UnitIV Spectral Analysis

Spectral densities, periodogram, he Spectral Representation and Spectral Distribution, Sampling Properties of the Sample Spectral Density, time invariant linear filters, the spectral density of ARMA(Auto Regressive Moving Average), smoothing the Spectral Density, Bias and variance, bandwidth, Confidence Intervals for the Spectrum,

Leakage and Tapering, auto regr	ressive spectrum estimation									
	T	T _
